The stock has a weekly performance of -1.4 percent and is -18.49 percent year-to-date as of the recent close.

Infinera Corporation (INFN) on April

20, 2016 announced that GARR, the Italian Research & Education Network, has deployed the Infinera DTN-X XTC Series to deliver advanced services and increase network efficiency as GARR scales its network capacity.

The Infinera DTN-X XTC Series enables GARR to deliver 100 Gb/s coherent transmission via 500 Gb/s super-channels and supports a forward-scale design to provide terabit super-channels in the future. The high capacity super-channels are made possible through the use of 500 Gb/s photonic integrated circuits (PICs) developed and fabricated by Infinera – the only supplier delivering 500 Gb/s of transmission capacity from a single line card. The DTN-X XTC Series integrates dense wavelength division multiplexing super-channel transmission with optical transport network (OTN) and packet switching for sub-wavelength service management. With up to 12 Tb/s of non-blocking OTN switching in a single bay upgradeable from 5 Tb/s, the DTN XTC Series provides seamless expansion as traffic requirements grow in the future.
