LABSTER

Agenda:

- Labster e la sfida STEM.
- Il metodo Labster.
- Studi sperimentali su Labster.
- I Laboratori virtuali di Labster.
- Esempi di simulazioni Labster.
- Labster e la Virtual Reality.
- Q&A

Labster e la sfida STEM

Che cos'è Labster ?

**Labster offre simulazioni di laboratorio con l'obiettivo di
migliorare i livelli di apprendimento e
ridurre i costi di accesso/uso dei laboratori**

and Bases

bases are all around you. In this lab, you will learn the basics of bases. You will get your hands very corrosiv...

Animal Genetics

The Animal Genetics Lab guides the student in learning about Mendelian inheritance and how a mutation in the DNA can give rise to an altered phenot...

Antibodies

In this lab, you will learn about the concepts of antibodies and antigens. You will also understand the ABO and Rhesus blood grouping systems and t...

Diabetes

In this lab, you will learn the basics about type II diabetes. You will be trained on how to measure your own blood sugar levels and how to give yo...

Embryology

In the Embryology simulation, you will perform experiments with the chicken and mouse model organisms. You will observe embryos in different develop...

Enzyme Kinetics

In the Enzyme Kinetics Lab, students learn how substrates are converted into products by catalysis. Additionally, students learn about the kinetics...

Hematology

Not only vampires are obsessed with blood. Haematologists love blood as well! In this simulation, you will join a biomedical diagnostics lab and le...

HPLC

In the first part of the exercise, students explore the HPLC machine. They can open various parts of the machine and learn about the different comp...

Introduction to Food Ma...

In this simulation, you will get to know the principles of Mendelian inheritance. You will learn how British nobles can be applied in order to...

Mendelian Inheritance

Students learn how to operate a light microscope and understand the mechanisms behind. They are presented with chicken mandibular slides that have...

Microscopy

Students learn how to operate a light microscope and understand the mechanisms behind. They are presented with chicken mandibular slides that have...

Bacterial Isolation

Bacterial Isolation simulation, you investigate the cause of a contamination of poultry meat by a dangerous bacteria strain that is res...

Biological Circuit

The Biological Circuit Lab is the continuation of the Synthetic Biology Lab. In this Lab, you will improve the design of the previous biological ci...

Carbohydrates

A scientific paper states that carbohydrate loading can improve the performance of endurance cyclists. Your goal is to learn how carbohydrates are ...

Equilibrium

In the Equilibrium Simulation, you will help a famous scientist to prevent a global famine. You will learn how to influence and predict the directi...

Eutrophication

In the Marine Biology Lab you've found that the low oxygen in the water was causing the suffocation of the fish. Looking for more data you'll a...

Evolution

You will start the lab by identifying an unknown sea creature that was washed ashore in Cambodia in 2013. By sequencing its DNA, you can compare it...

Introductory Lab

In this experiment students will learn about acids and bases as well as proper risk evaluation in the laboratory. They will mix acid/base with wa...

Invertebrate Model Syst...

A patient with a deformed head is examined at the hospital. You are asked by the doctors to find the genetic defect responsible for this rare condit...

Ionic and Covalent Bonds

Atomic bonding! Learn about how atoms hook up and help a friend to analyze two mysterious substances he got from an alchemist to cure his migraine...

Molecular Cloning

Another cloning is one of the techniques that laid the foundation for modern biotechnology. The technique was first used in the 1980's and...

Monogenic Disorders

In this lab, you will learn about the monogenic disorder Cystic Fibrosis and its inheritance from our genes to the ap...

Cell culture basics

In the Cell Culture Basics Simulation, you will use the aseptic technique to culture mammalian cells. You will perform a cell passage and freeze so...

Cell Culture Basics - Tra...

In the Cell Culture basics – Transfection simulation you will transfect a melanoma cell line using a lipid-based reagent in order to overexpress ...

Cellular Respiration

The Cellular Respiration Lab covers the main pathways of glucose metabolism and energy use. The storyline starts with a contract for the student by...

FACS

In the Fluorescence-automated Cell Sorting (FACS) Simulation, you will learn the basics of flow cytometry and how to use a flow cytometer with fluo...

Fermentation

Fermentation technology can be used to produce valuable biological compounds in large quantities. For instance, most antibiotics are produced using...

Flow Injection Analysis

In the Flow Injection Analysis (FIA) Simulation you will learn about the scientific innovation process and the flow injection analysis machine and ...

Lab Safety

In this simulation you will learn everything you need to know to survive your first day in the laboratory.

MAGE

In the Multiple Automated Genome Engineering (MAGE) Simulation, you will learn how to edit the genome of Escherichia coli in order to enh...

Mammalian Transient P...

In the Mammalian Transient Plasmid Expression simulation, you will use the Expedit system to perform a transient plasmid production in Escherichia c...

Nuclear Magnetic Reson...

In this MRI, you will learn how to use MRI to characterize binding events between proteins and ligands. We will perform NMR experiments and inter...

Pasteurization and Steril...

In the Pasteurization and Sterilization lab, you will follow an original recipe to increase the shelf life of fresh juice. Together with the ...

Pluripotent Stem Cell Cu...

In the Pluripotent Stem Cell Culture Simulation, you will culture pluripotent stem cells (PSCs) using K-blastocyst medium. You will do...

Chemistry Safety

In the Chemistry Safety Simulation you are on a mission to produce sustainable biodiesel. You will learn all the safety measures necessary for a ch...

Crime Scene Investigati...

Investigating the crime scene, the student collects blood samples in hopes that the murderer has left traces of DNA. After sampling, the student ac...

Cytogenetics

Students begin this lab in an ultrasound examination room where a young mother-to-be receives an abnormal ultrasound result. Students must find the...

Gene Expression

To study obesity you will collect a fat sample from lean and obese pigs and extract the RNA using the phenol-chlorophorm method. You will isolate...

Gene Regulation

The Gene Regulation Lab development is based on the Nobel Prize in Physiology 2012 case study. In this lab, students will learn about gene expressi...

Genetically Engineered ...

You begin the investigation of a massive fish kill by collecting water and fish samples. After taking the sample from the field you have to go back...

Marine Biology

In this simulation you will join an iGEM team to design a biosensor that can sense plastoquinol-forming bacteria. You will combine two Biobrick parts an...

Medical Genetics

In the Medical Genetics Lab, students learn about Mendelian genetics, linkage analysis and finding the defective gene in a family with hereditary dis...

Meliosis

Identify the main characteristics of male and female gametes. Be sperm and ova. You will use the light microscope for gamete identification. Out...

Plant Transcriptionomics

In the Plant Transcriptionomics Simulation, you will perform a series of experiments to identify the metabolic pathway that produces an antidiabetic compound in a...

LABSTER

Permettere alla nuova generazione di
scienziati di cambiare il mondo

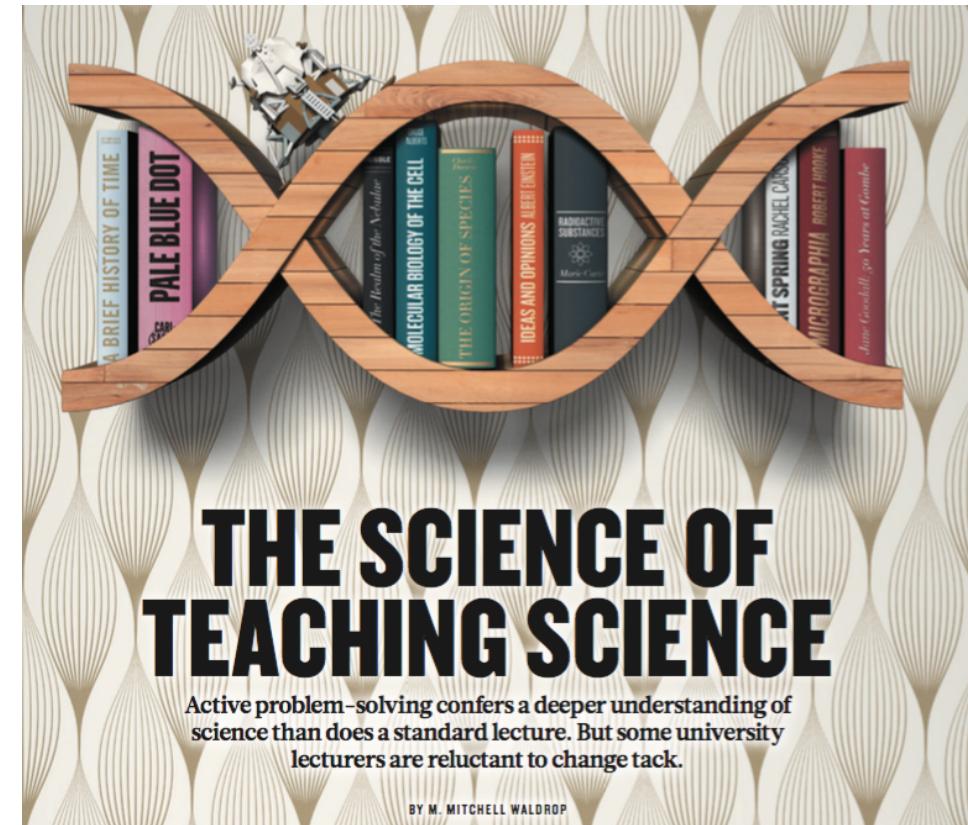

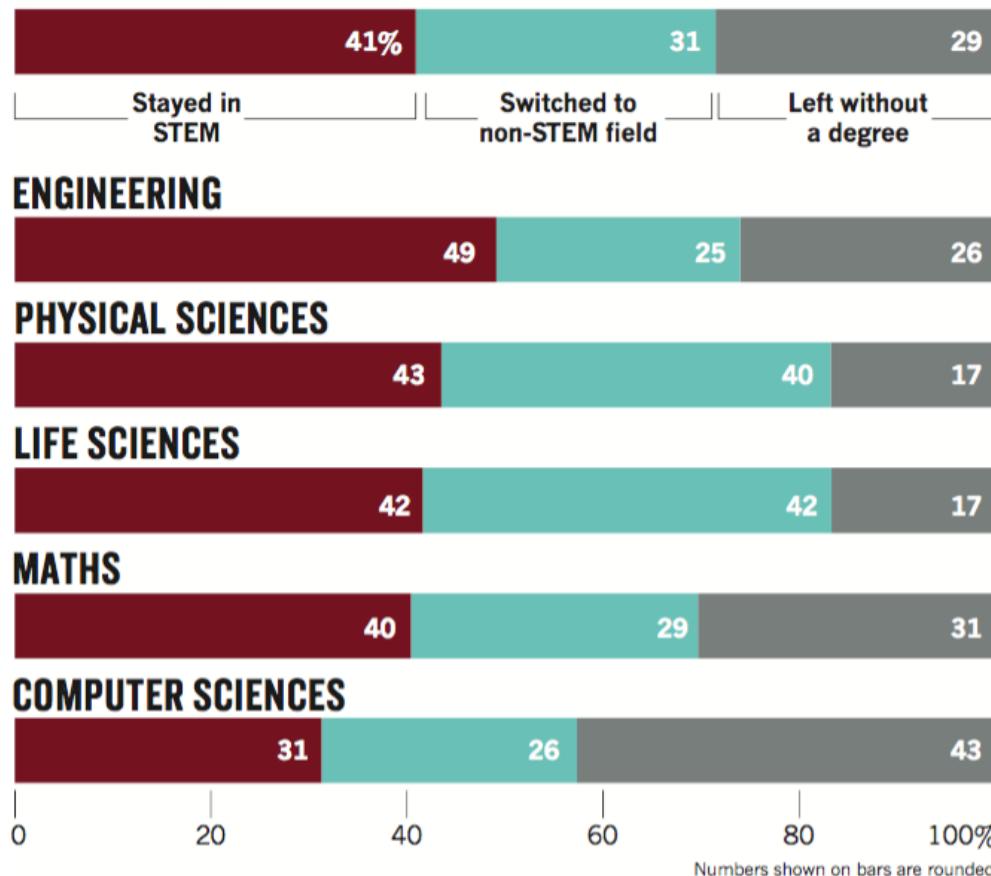

.... ma spesso l'insegnamento delle scienze risulta
noioso, di scarso effetto e costoso

Source: Moskovitz, SCIENCE, 2011, Institute for Technology and Engineering (2008)

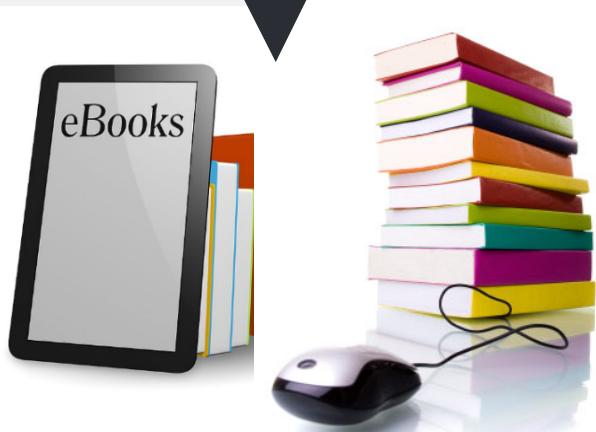

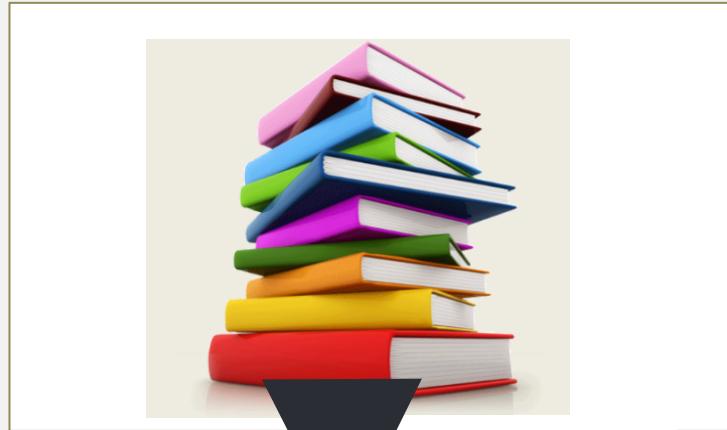

La sfida STEM

STEM AVERAGE

Source: (Waldrop, 2015) - Nature

Stiamo veramente innovando nell'insegnamento?

E-books, YouTube e MOOCs portano gli stessi contenuti a un numero maggiore di studenti, con metodi simili a quelli di decenni fa, senza una vera innovazione.

Gli studenti sono la forza lavoro di domani

Gli scienziati di domani

Il metodo Labster

“Oltre il 90% degli studi comparativi sperimentali sono a favore dell’uso combinato di simulatori di volo e voli di addestramento rispetto alla solo formazione di volo tradizionale.”

LABSTER

Ogni giorno migliaia di studenti accedono a laboratori
avanzati attraverso la tecnologia di Labster!

Labster virtual laboratories are proven to significantly increase learning impact over traditional methods

Source: Nature Biotechnology 2014, Statistically significant ($p<0.001$)

Caso di studio: Labster e l'Università di Copenhagen

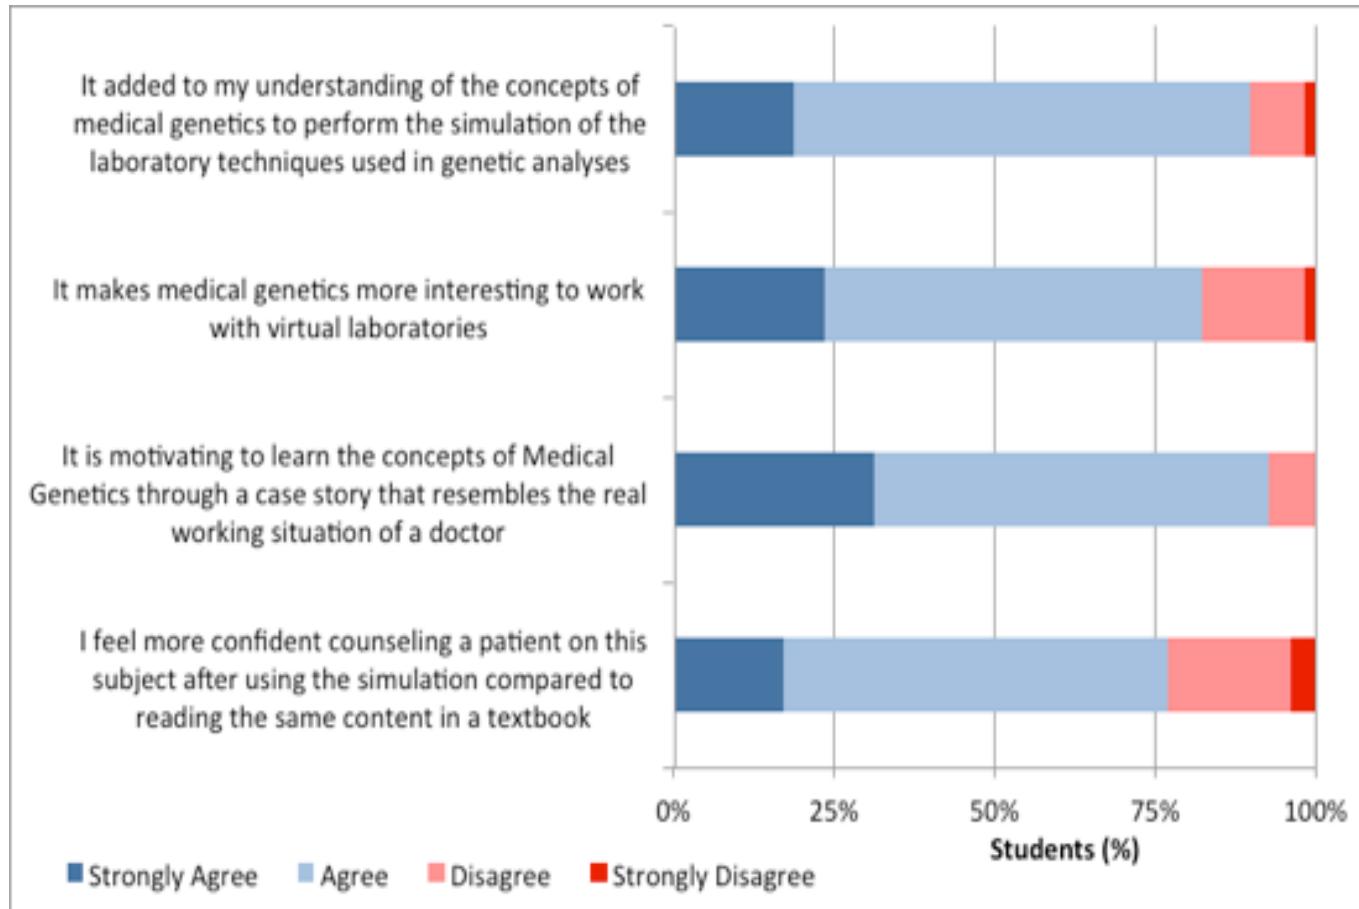

Facoltà di Medicina, Farmacia e Veterinaria

- Diminuzione della percentuale di insuccessi agli esami.
- “Nei laboratori reali, gli studenti finivano gli esercizi di sperimentazione più velocemente rispetto all’anno anteriore”.
- Minor numero di errori da parte degli studenti .

*Dr Lasse Kristoffer Bak,
Professore presso
l’Università di Copenhagen*

Caso di studio: Labster e l'Università di Copenhagen

PERCHE' I NOSTRI CLIENTI HANNO SCELTO E CONTINUANO A SCEGLIERE LABSTER?

1

Attracting students.

Using Labster the university is made even more attractive to students due to:

- The use of latest IT technology for learning
- Access to then best high-tech lab-machines at your virtual reach
- Learning science made fun
- Bridging science and career opportunities

2

Save costs and get better data.

Students can use their time more effectively in real labs and teachers receive detailed information of specific tasks.

- Better utilization of laboratory equipment
- Data-driven performance and effect measurement
- Insights to students' performance

3

New forms of learning.

Using 3D/VR immersive teaching the university can teach in new and different ways:

- Visualization of the abstract or the non-visual
- Learning by failure
- The synergies of combining Labster with other learning techniques improves the outcome

I Laboratori virtuali di Labster

Aumentare il coinvolgimento e il livello di apprendimento dello studente attraverso 3 componenti chiave

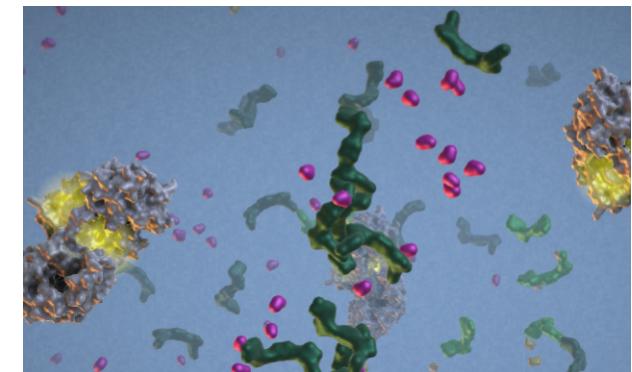

Gamification: problemi basati su casi reali studiati in Università e Centri di Ricerca

Strumentazione avanzata,
inaccessibile e costosa

Animazioni guidate in
grafica 3D

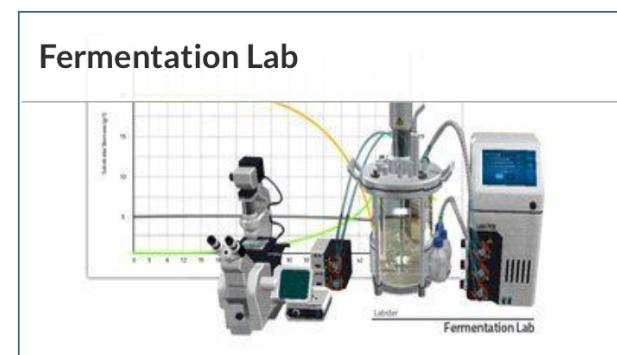

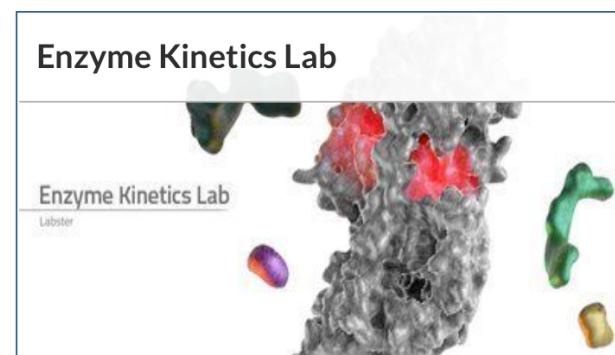

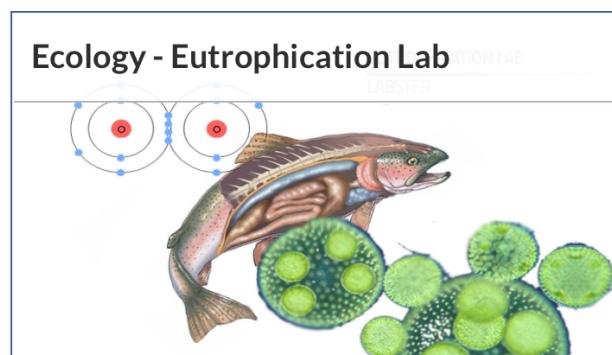

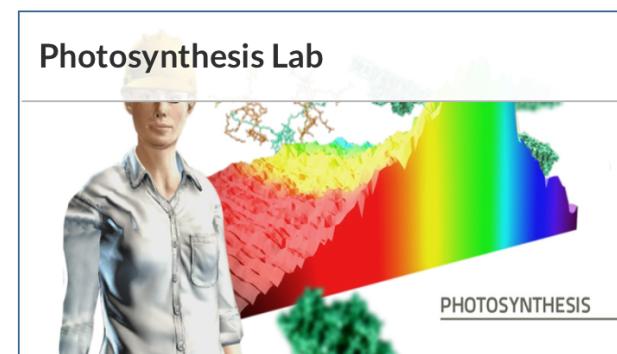

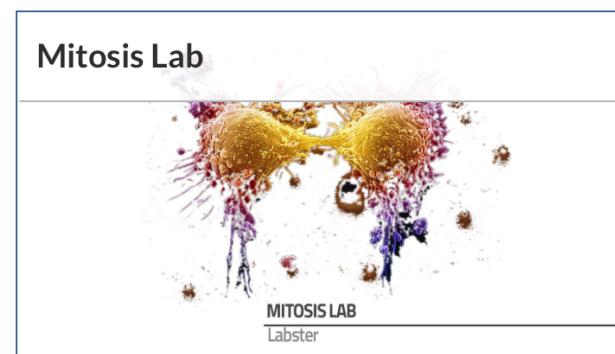

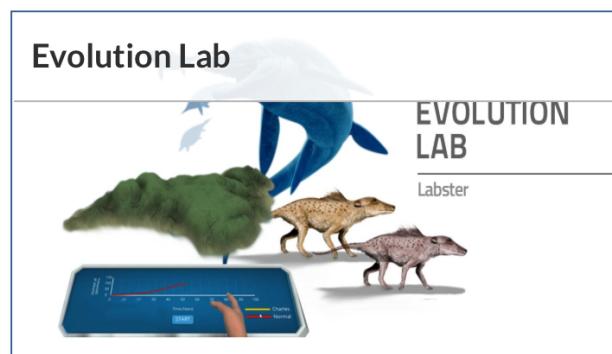

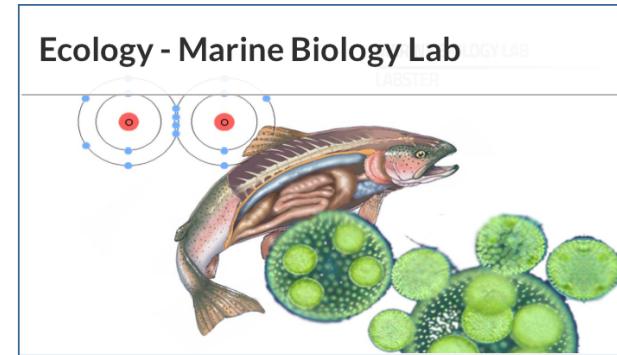

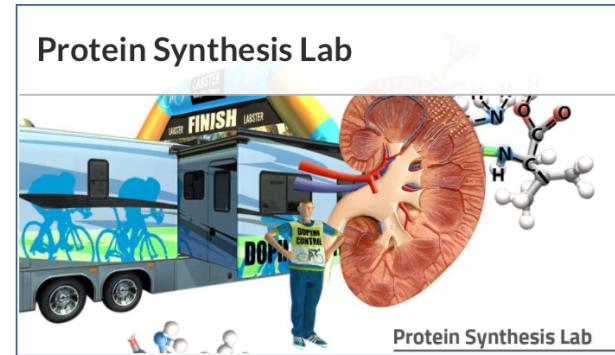

Utilizzo di macchine e strumenti di laboratorio spesso troppo costosi

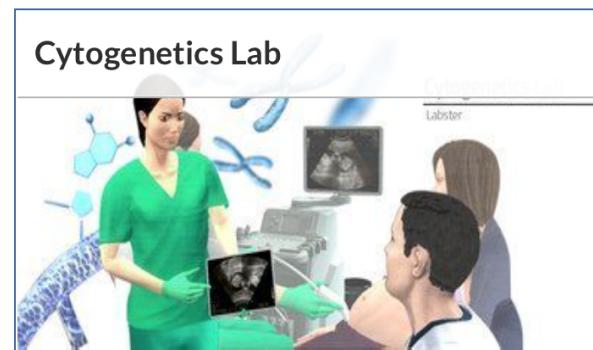

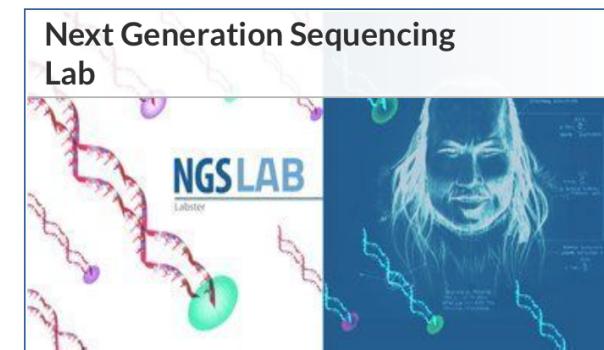

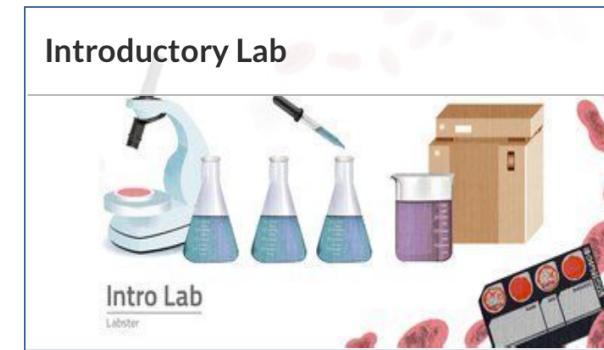

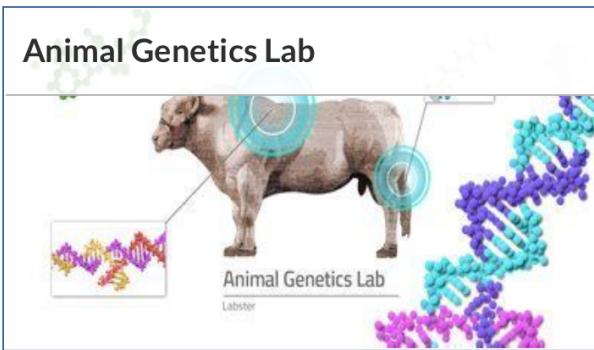

\$600,000 Next-Gen DNA Sequencer

Esempi di Laboratori per corsi introduttivi

Esempi di Laboratori per corsi avanzati

The screenshot shows the Labster website's virtual catalogue. At the top, there's a navigation bar with links for 'Simulations', 'For Institutions', 'Testimonials', 'About', and 'Login'. A search bar is also present. On the left, a sidebar titled 'All Simulations' lists various academic categories: Biology, Biochemistry, Biotechnology, Cellular And Molecular Biology, Ecology, Evolution And Life Diversity, Genetics, Microbiology, Physiology, Chemistry, General Sciences, and Medicine. Below this, there's a brief description of a simulation related to Mendelian inheritance. Each simulation card includes a thumbnail image, a title, a brief description, a rating (5 stars), and a length (e.g., ~67 min). The first two simulations shown are 'Antibodies' and 'Bacterial Isolation Lab'.

Lab Safety

About This Simulation

In this simulation you will learn everything you need to know to survive your first day in the laboratory. The lab that you are going to enter is a mess: identify the different hazards and remove them. You will get to know all the safety equipment and learn how to dress properly for your first date with a scientist.

In the virtual lab you can do things that would be far too dangerous in the reality. You can take advantage of this and learn by making mistakes. Will you be able to survive all the dangers of a laboratory?

Techniques

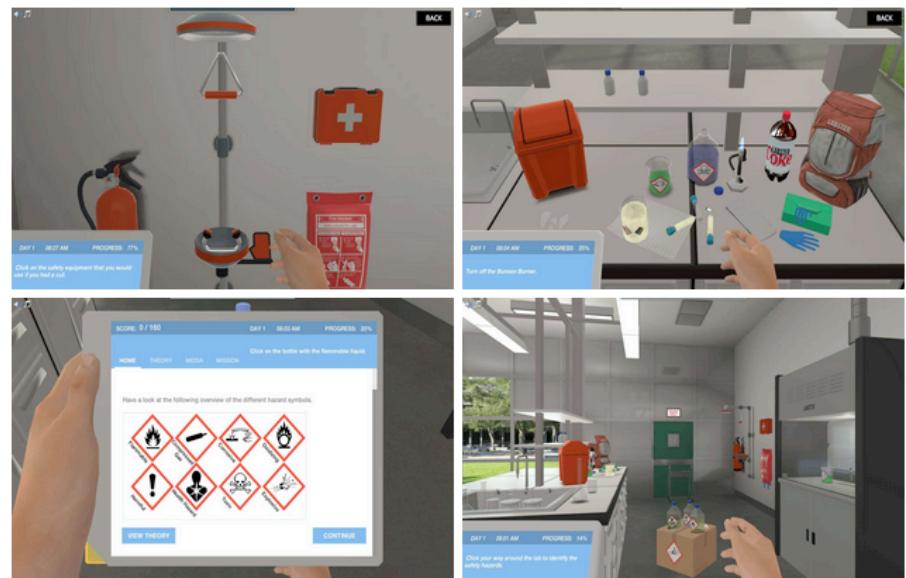

- GHS hazard pictograms
- Working with corrosive chemicals
- Safety station
- Dress code for lab

Collaborator

Learning Objectives

- Learning how you should be dressed for a day in the lab.
- Figuring out the dos and don'ts in a laboratory.
- Learning when and how to use the lab safety equipment.
- Reacting in an emergency situation.

DAY 1 08:00 AM

PROGRESS: 0%

Welcome to Labster. Let's get ready for this virtual learning session.

Lab Screencast

Crime Scene Investigation

About This Simulation

Investigating the crime scene, the student collects blood samples in hopes that the murderer has left traces of DNA. After sampling, the student accesses a virtual lab to perform DNA analysis.

In the lab, a PCR kit, purified DNA from the crime scene, and a full lab bench set up are available. It is now up to the student to mix the correct reagents and perform PCR in the lab PCR machine. A 3D animation will show the Polymerase Chain Reaction at the molecular level, illustrating DNA structure and replication. Quiz questions will be asked throughout the experimental process, as well as at specific steps of the PCR reaction itself. With the media player function, the students will be able to see the animation several times, pause it, or revisit it at a later time for exam preparation.

Students run a gel on their collected sample and other already prepared samples from suspects. Comparing the patterns that emerged on the gel, students will be asked to identify the murderer. Upon completing the lab, students will have a thorough understanding about DNA profiling and Small Tandem Repeats. Additionally, quiz questions accompanying the experimental steps will check on the students understanding of the content. A Labster Learning Wiki is also supplemented to provide the student with background theory.

Learning Objectives

- Learning about the function of DNA polymerase in DNA replication and synthesis.
- Understanding the Polymerase Chain Reaction (PCR) technique using DNA from a blood sample as the template.
- Understanding the Gel Electrophoresis technique that separates DNA according to its size.
- Learning about the unique signature of the human genome and the use of Tandem Repeated Region (TRR) in DNA profiling.

Techniques

- PCR
- Gel electrophoresis
- DNA profiling

Collaborator

DAY 1 08:01 AM

PROGRESS: 7%

First, pick up a blood sample from the suspect at the crime scene.

Lab Screencast

Blood from suspect

Blood contains a variety of cell types.
Some of these contain DNA.

Labster e la Virtual Reality

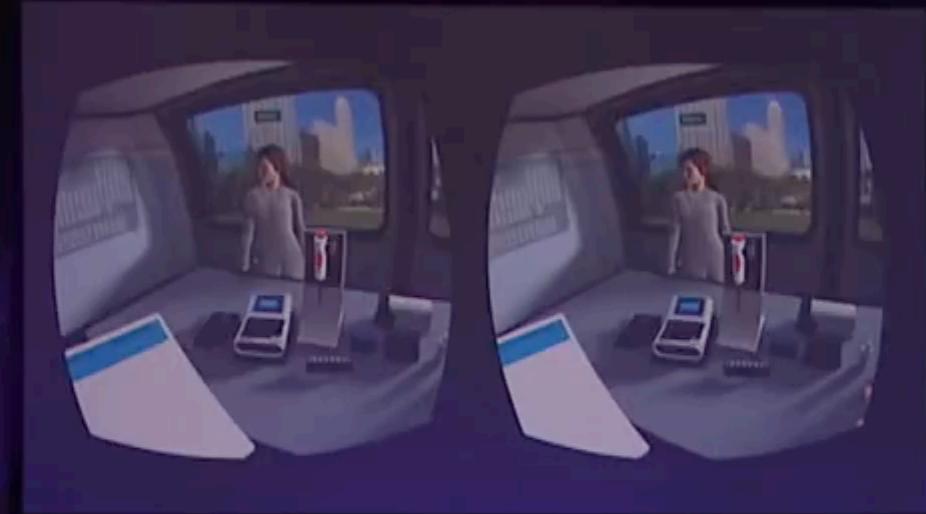

Molti studi attuali propendono per un aumento del livello di apprendimento attraverso la realtà virtuale

Labster è un'azienda leader nello sviluppo di laboratori virtuali per Virtual Reality
