

GARR 2007 Conference, Network Humanitatis: un filo di luce che unisce il sapere

Open Three (O3) Consortium on GARR and GÉANT networks: an Italian open source initiative to test and implement an advanced e-health European Living Lab in Italy and Europe

Eng. Andrea Poli

O3-Consortium

SSIC-HECE

*(Studi superiori di Ingegneria Clinica- Higher Education in Clinical
Engineering)*

**SSIC
HECE**

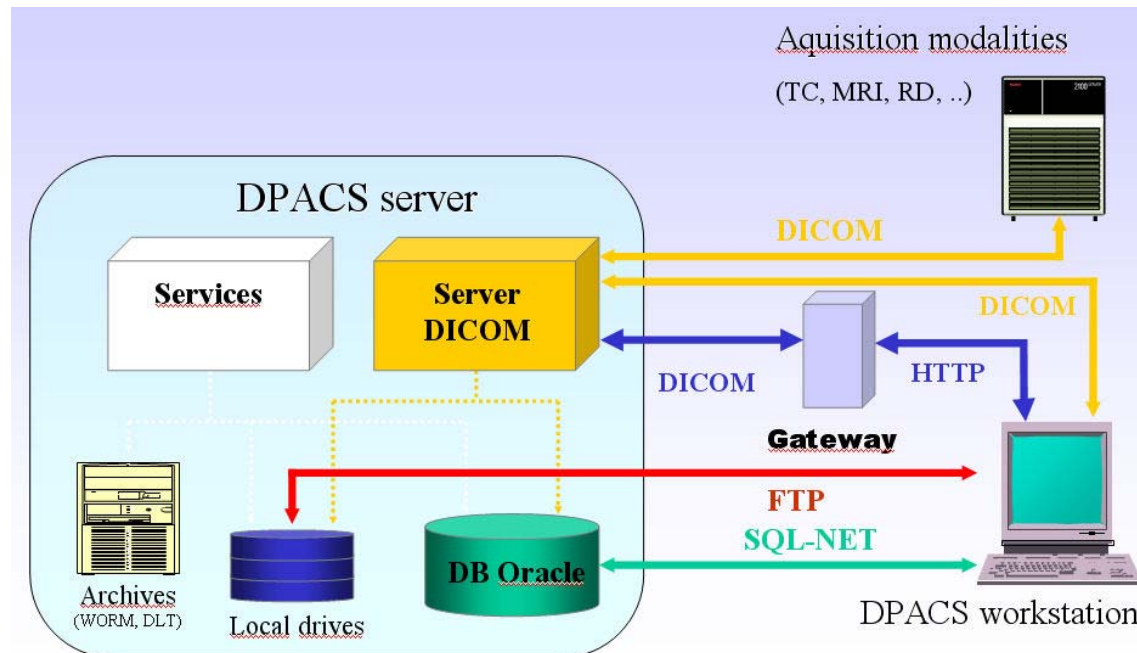

Eng. Andrea Poli - Garr 2007, 29-31 October 2007,
Roma

Who are we?

- ➡ SSIC-HECE (Studi Superiori di Ingegneria Clinica - Higher Education in Clinical Engineering) directed by Prof. Paolo Inchingolo
 - ◆ Bioengineering and ICT Group (BICT) of the University of Trieste
- ➡ More than 25 people working on different fields
- ➡ Laboratories
 - ◆ HTL, Health Telematics Laboratory
 - ◆ ANL, Advanced Network Laboratory
 - ◆ OSL, Open Source Laboratory
 - ◆ Neuromodelling
 - ◆ Bioengineering

Long History

The research of Bioengineering and ICT group of UniTS (BICT) together with HECE started in **1991** after:

the first PACS system was installed in the Cattinara hospital (Trieste) in **1988**, **the first European installation** of a commercial PACS system in a hospital enterprise

Despite being so innovative, it was early clear that the proprietary installation was forcing users to adapt to the system and not vice versa

-> research in **Open Pacs Systems** started

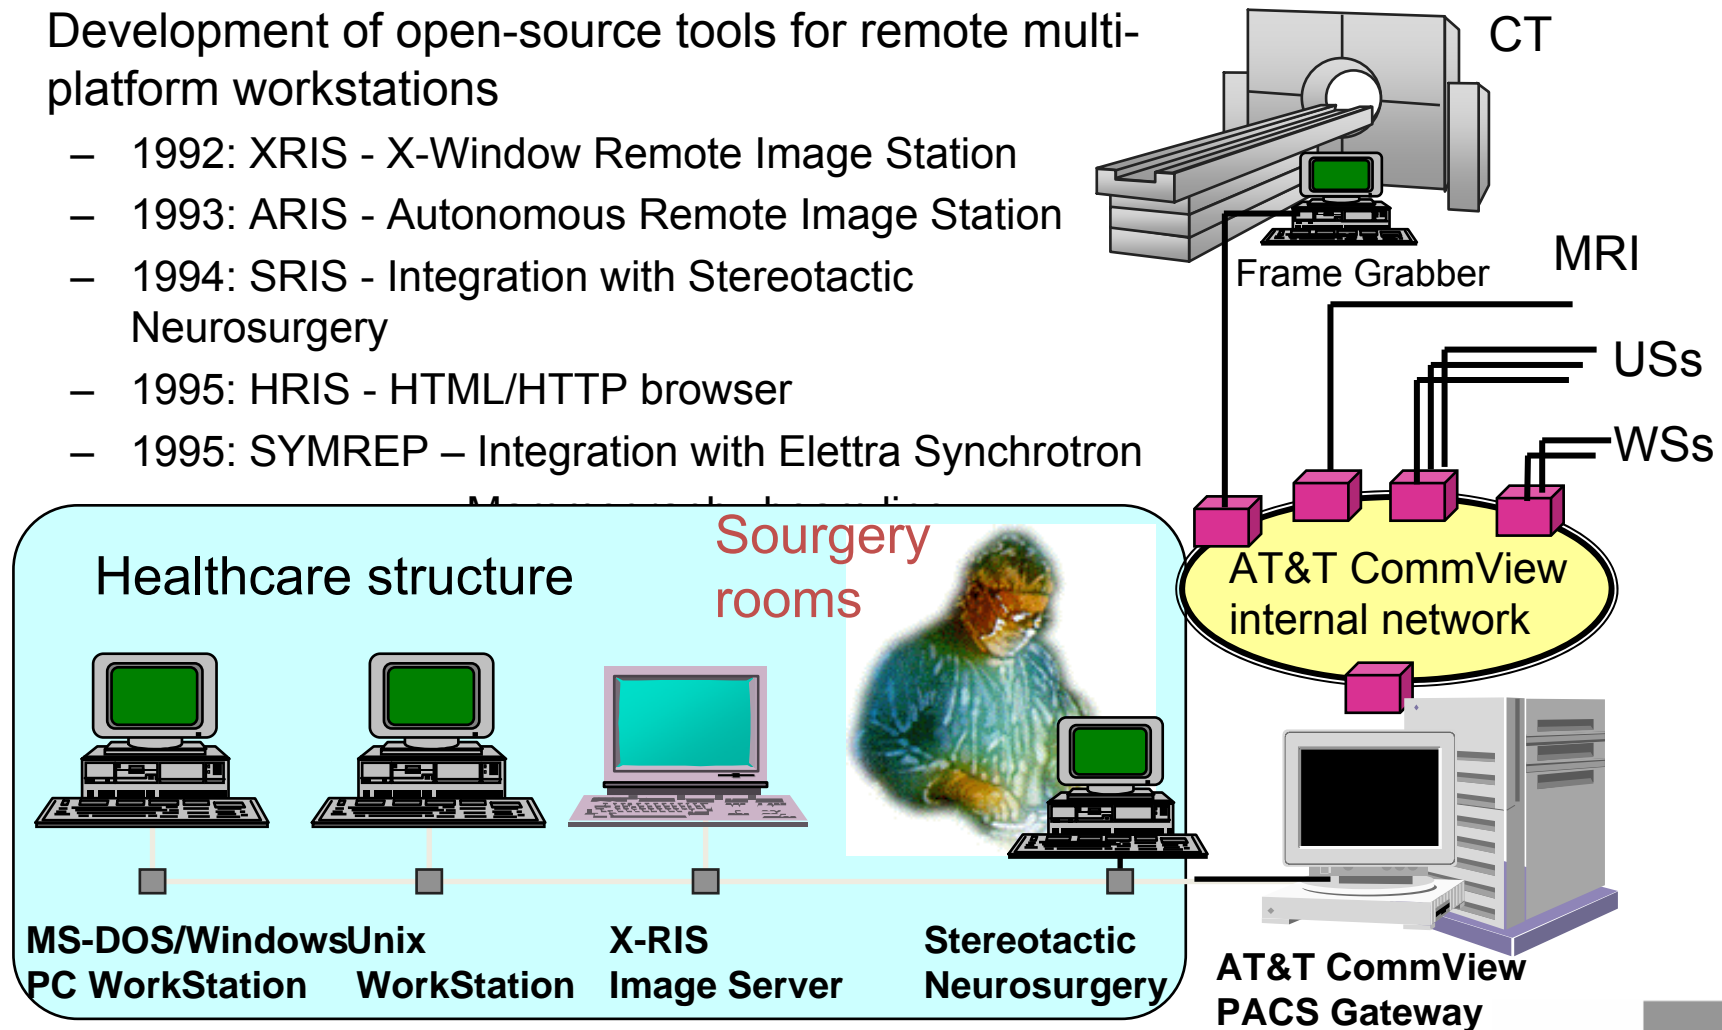

Eng. Andrea Poli - Garr 2007, 29-31 October 2007, Roma

The Open-PACS (O-PACS) Project

- Development of open-source tools for remote multi-platform workstations
 - 1992: XRIS - X-Window Remote Image Station
 - 1993: ARIS - Autonomous Remote Image Station
 - 1994: SRIS - Integration with Stereotactic Neurosurgery
 - 1995: HRIS - HTML/HTTP browser
 - 1995: SYMREP – Integration with Elettra Synchrotron

The DPACS project

Health Telematics Laboratory

HTL

dee

**SSIC
HECE**

- Studi Superiori in Ingegneria Clinica

- Higher Education in Clinical Engineering

- ➡ 1995, the Data and Picture Archiving & Communication System (DPACS) project:
 - ◆ proposal of a new concept of integrated clinical systems
- ➡ goal to collect, store, retrieve, distribute at any level (hospital, private clinic house, territorial body, etc.) all the relevant information related to each European citizen.
- ➡ implemented at Trieste in 1997

**SSIC
HECE**

Eng. Andrea Poli - Garr 2007, 29-31 October 2007,
Roma

EuroPACS-MIR 2004 in the enlarged Europe

Trieste,
16-18 September 2004

- ➡ discuss and propose *innovative and organizational solutions for the ICT-based integration of the health systems in the enlarged Europe*

Eng. Andrea Poli - Garr 2007, 29-31 October 2007,
Roma

The Open Three (O3) Consortium project

What O3 Consortium is?

➡ An inclusive project to cover the 3 main aspects of the future of e-health in Europe and in the world:

- 📄 e-hospital,
- 📄 e-territory,
- 📄 e-vital (tele-home-care, Ambient Assisted Living)

with **open-source** and **open system interconnection** ICT solutions

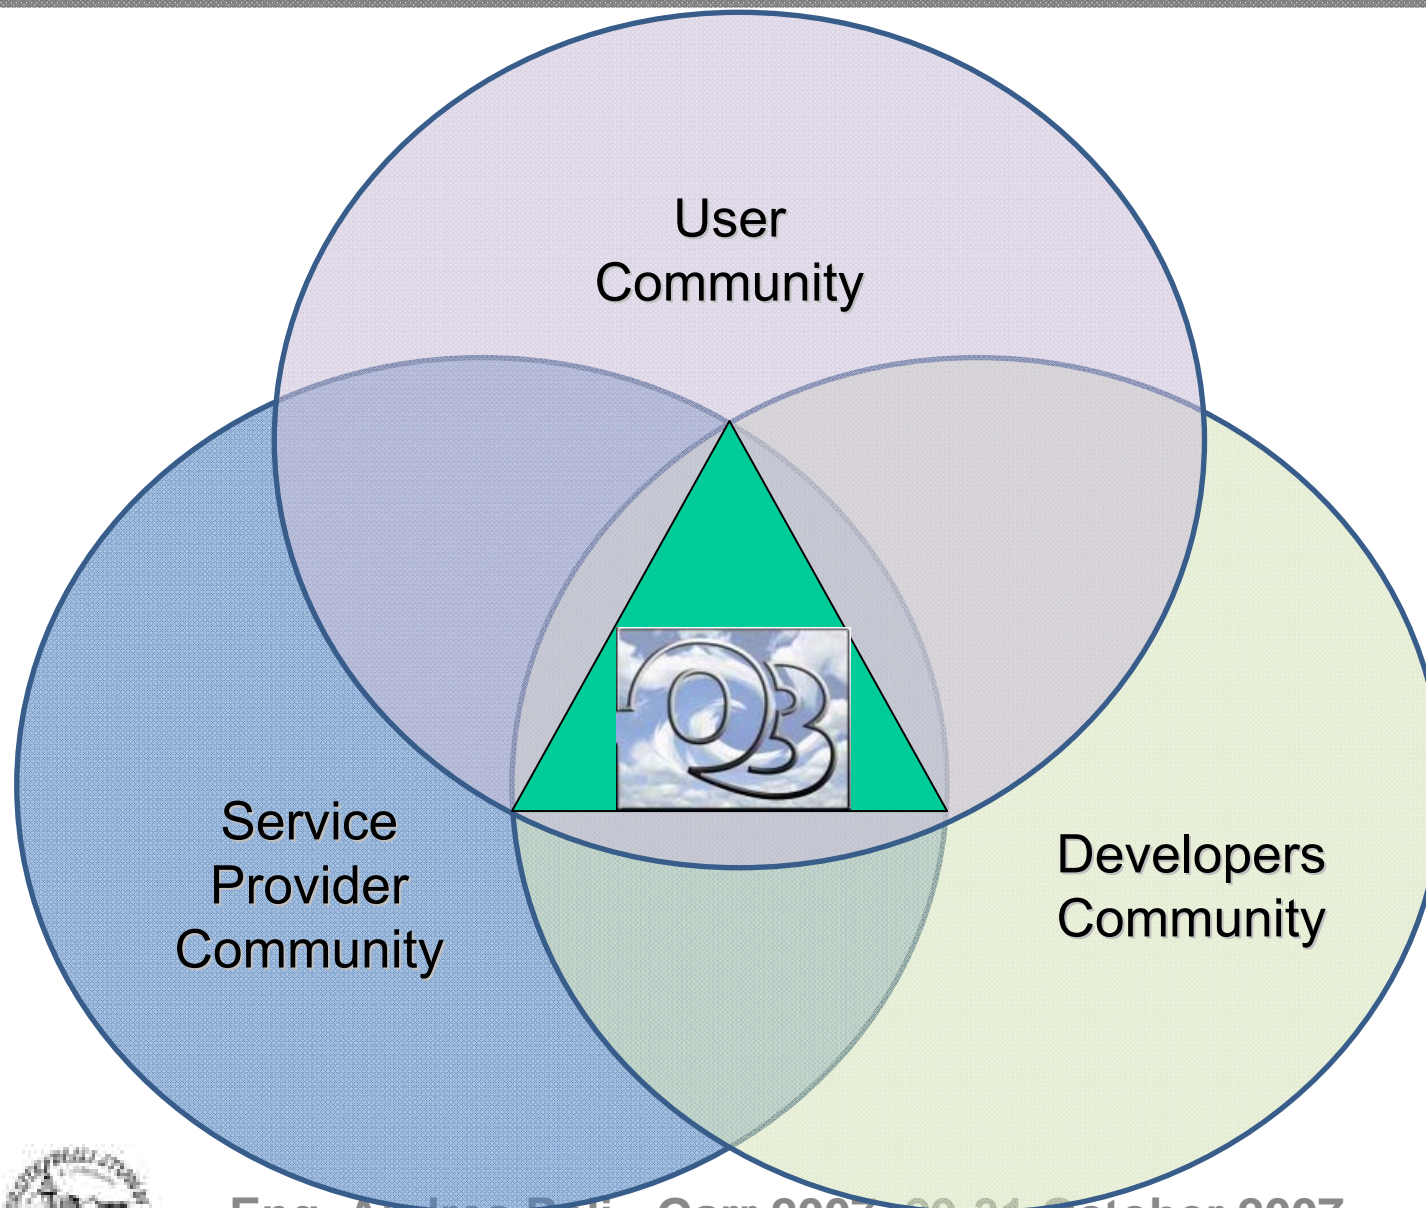

❖ Including e-learning (education and long-life-education), and new mobile communication devices

**The mission:
to promote an
integrated three
dimensional Health
Policy for every
European citizen as
well as world-wide
health management
integration**

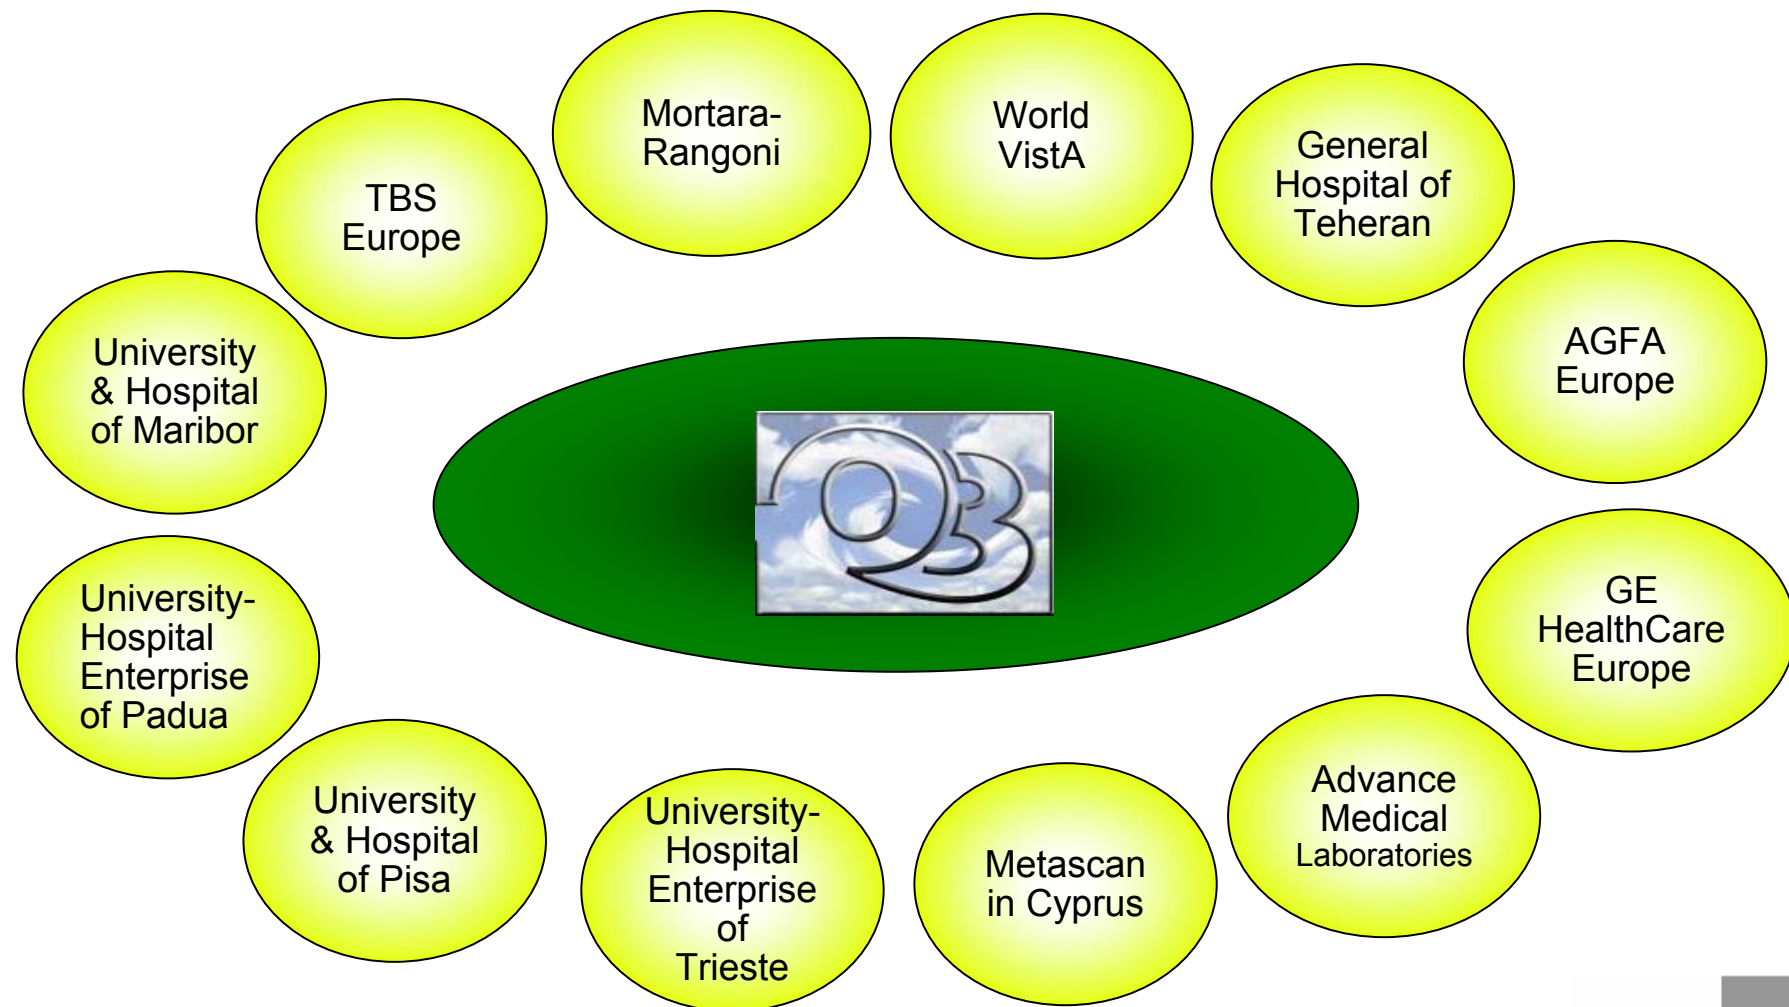

O3-Consortium Community

- ➡ The community (user, developers and service provider) is currently made of
 - ◆ the international network ABIC-BME
 - ◆ the international network ALADIN
 - ◆ about 70 bilateral cooperation Agreements of the Higher Education in Clinical Engineering (HECE), University of Trieste, with
 - Universities
 - Hospitals
 - Medical Research Centers
 - Healthcare Enterprises
 - Industrial Enterprises
 - Governmental Agencies

O3 Main Collaborations

O3-Consortium as Living Lab

- ➡ During year 2006, O3-Consortium was presented by Prof. Inchingolo as a “Living Lab”
- ❖ The Living Lab Network is a new model proposed by the European Community for fostering innovation and sharing knowledge
- ➡ It is a collaborative model in which Universities, Research Centers, Enterprises, Governmental Agencies and **Users** work together for:
 - ❖ **Reducing the gap between services and citizens.**
- ➡ Users/Citizens are at the center of the process.

O3-Consortium and research networks

➡ The coordination of the communities and the delivery of services to the citizens need fast and secure communication.

◆ Trials and research are done across research networks

■ GARR

■ GEANT

O3 characterization

- ➡ Citizen-centric approach
- ➡ Scalability
 - ◆ at any range, up to national and international dimensions
- ➡ Open Standard (DICOM, HL7, etc.)
- ➡ Interoperability - 100% adherence to IHE
- ➡ Open Source
 - ◆ to facilitate wide diffusion and re-use
- ➡ Java and Web technologies
 - ◆ to facilitate portability

► Multi-centricity and Internationalization

- ◆ To support national services in multi-language areas and trans-national services

► full independency of

- ◆ data-base
- ◆ OS
- ◆ HW
- ◆ language

IHE = Interoperability!

- ➡ O3's "bricks" are built according to IHE "Actors"
 - ◆ usually IHE "Actors" are built on the already existent systems to achieve IHE compliancy
- ➡ O3's information flows are built according to IHE Integration Profiles
 - ◆ usually IHE "Integration Profiles" are built on the already existent systems to achieve IHE compliancy

- 

O3-Consortium and Open Source

- ➡ Open Source is a new definition of the meaning of “Free Software” started in early '80
- ◆ It could be potentially confused:
 - ▣ “Free” means no money?
 - ▣ NO!
- ◆ Free should be intended not as
 - ▣ “Free Sandwich”
- ◆ But as
 - ▣ “Free Speech”

- ➡ In this book, Eric Raymond, one of the biggest guru of open source community, describes two opposite models about the writing process of OS system:
 - ◆ the cathedral model
 - ◆ the bazaar model.

➡ "fully crafted by individual wizards or small bands of mages working in splendid isolation"

◆ Roles well defined

- 📁 Project design
- 📁 Project management
- 📁 Project implementation

➡ Users are passive!

Bazaar Model

- “a great bazaar of differing agendas and approaches”
- ◆ Creative Collaboration
- ◆ Roles not clearly defined
- ◆ Great integration across developers and users
- Very important role of the users!

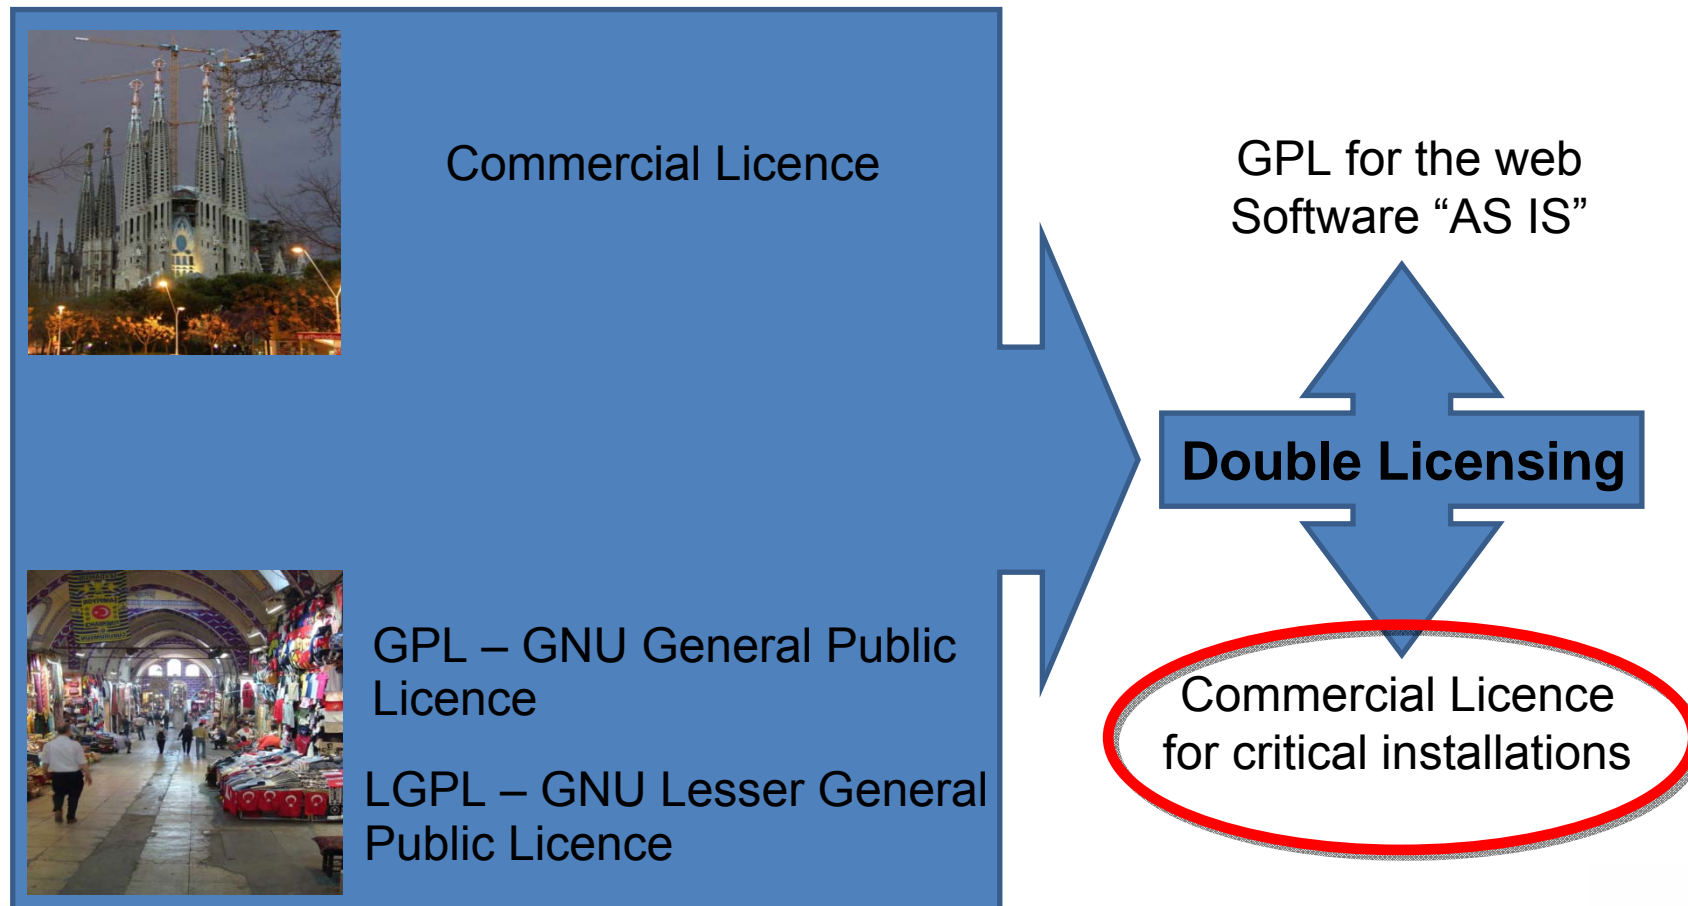

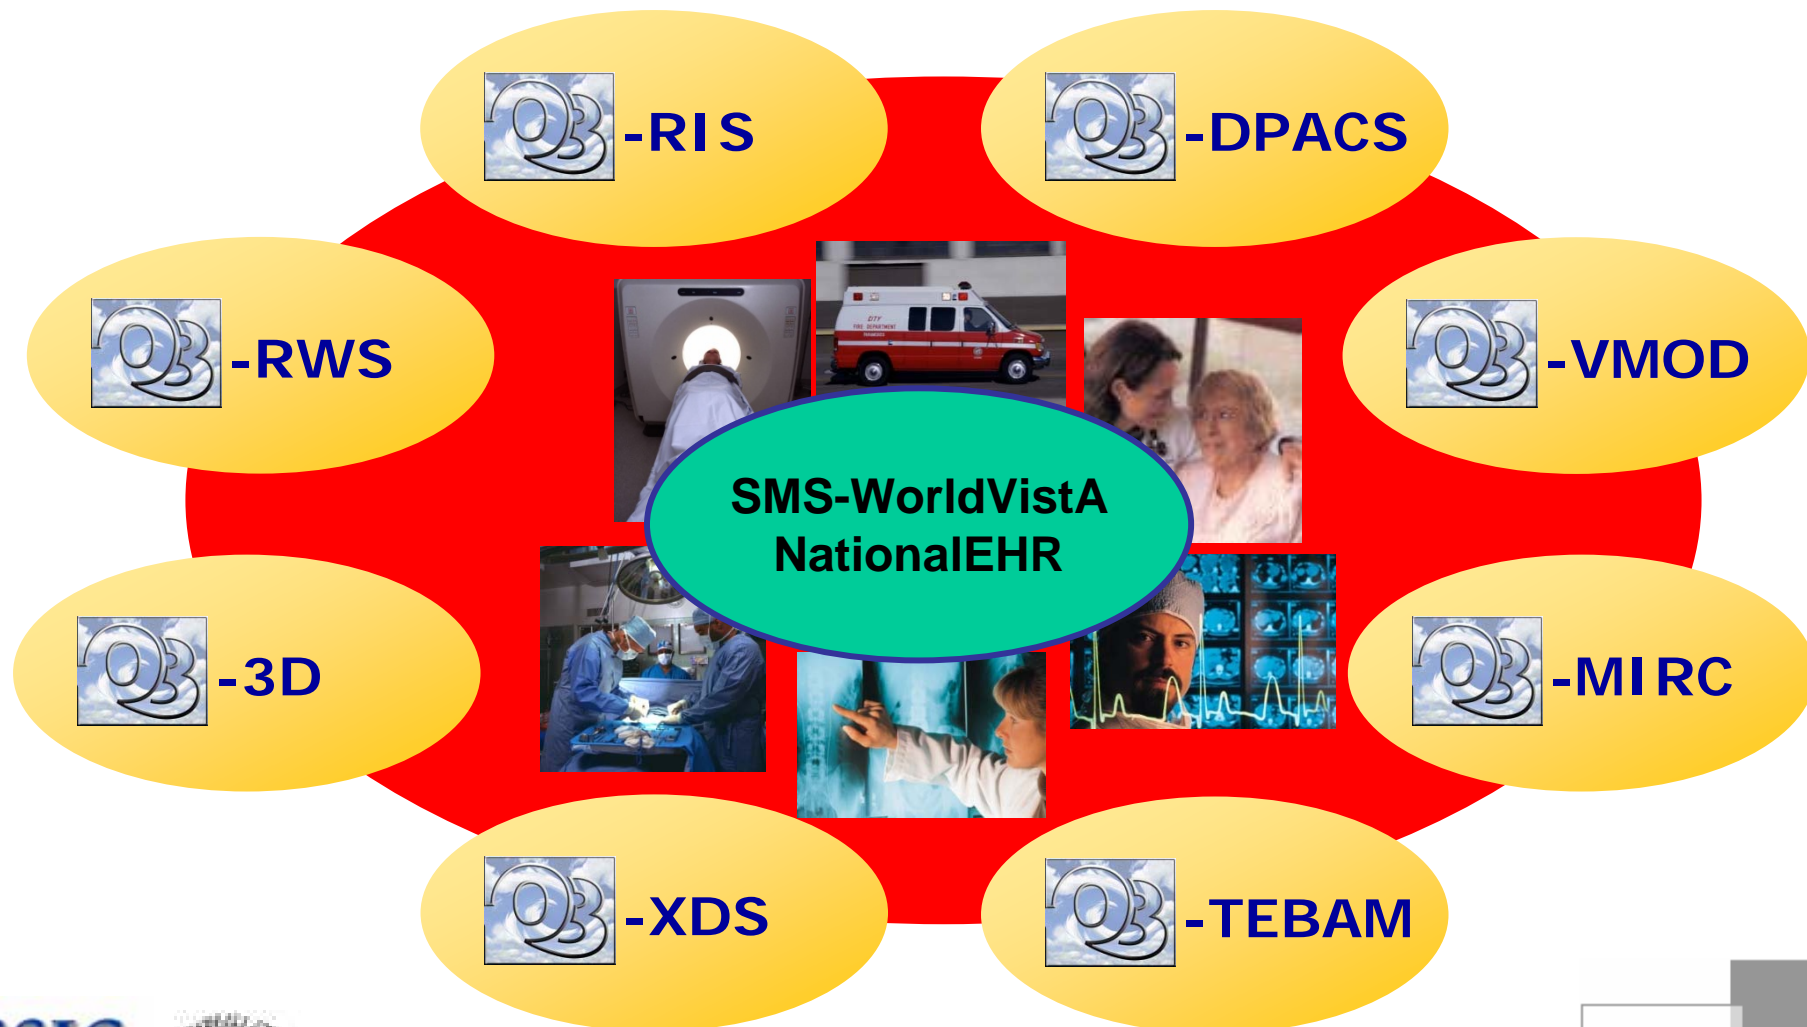

- ➡ O3-Consortium implements both approaches:
 - ◆ A well trained core team that has the complete know-how and management of the project
 - ◆ A wide community of users and developers

O3 Licences approach

- ➡ The same approach (cathedral/bazaar) is used for the licences!

- ➡ On SourceForge.net
- ➡ On www.O3Consortium.eu
 - ◆ for registered users
 - ◆ with web-based free help service
 - ◆ with O3-AID free 26 facilities for third-world countries
- ➡ On DVD
 - ◆ under service agreement

➡ Direct to a user (single site, cluster, or ASP)

- ◆ Full service (1-2-3 levels) 7/7-24/24
- ◆ Usually remotely (through a VPN)
- ◆ Can include management

➡ Indirect to a Service Provider

- ◆ Level 3 service
- ◆ Courses for training 1-2 levels services

O3 Consortium: the future

- ➡ O3 Enterprise is a Spinoff of the University of Trieste with the participation of
 - ◆ O3 Consortium core team
 - ◆ University of Trieste
 - ◆ Enterprises
- ➡ With this new object the O3-Consortium should create a new collaboration model for the healthcare.
 - ◆ Close and powerful collaboration between all the actors involved in healthcare delivery and management!

New model for Healthcare

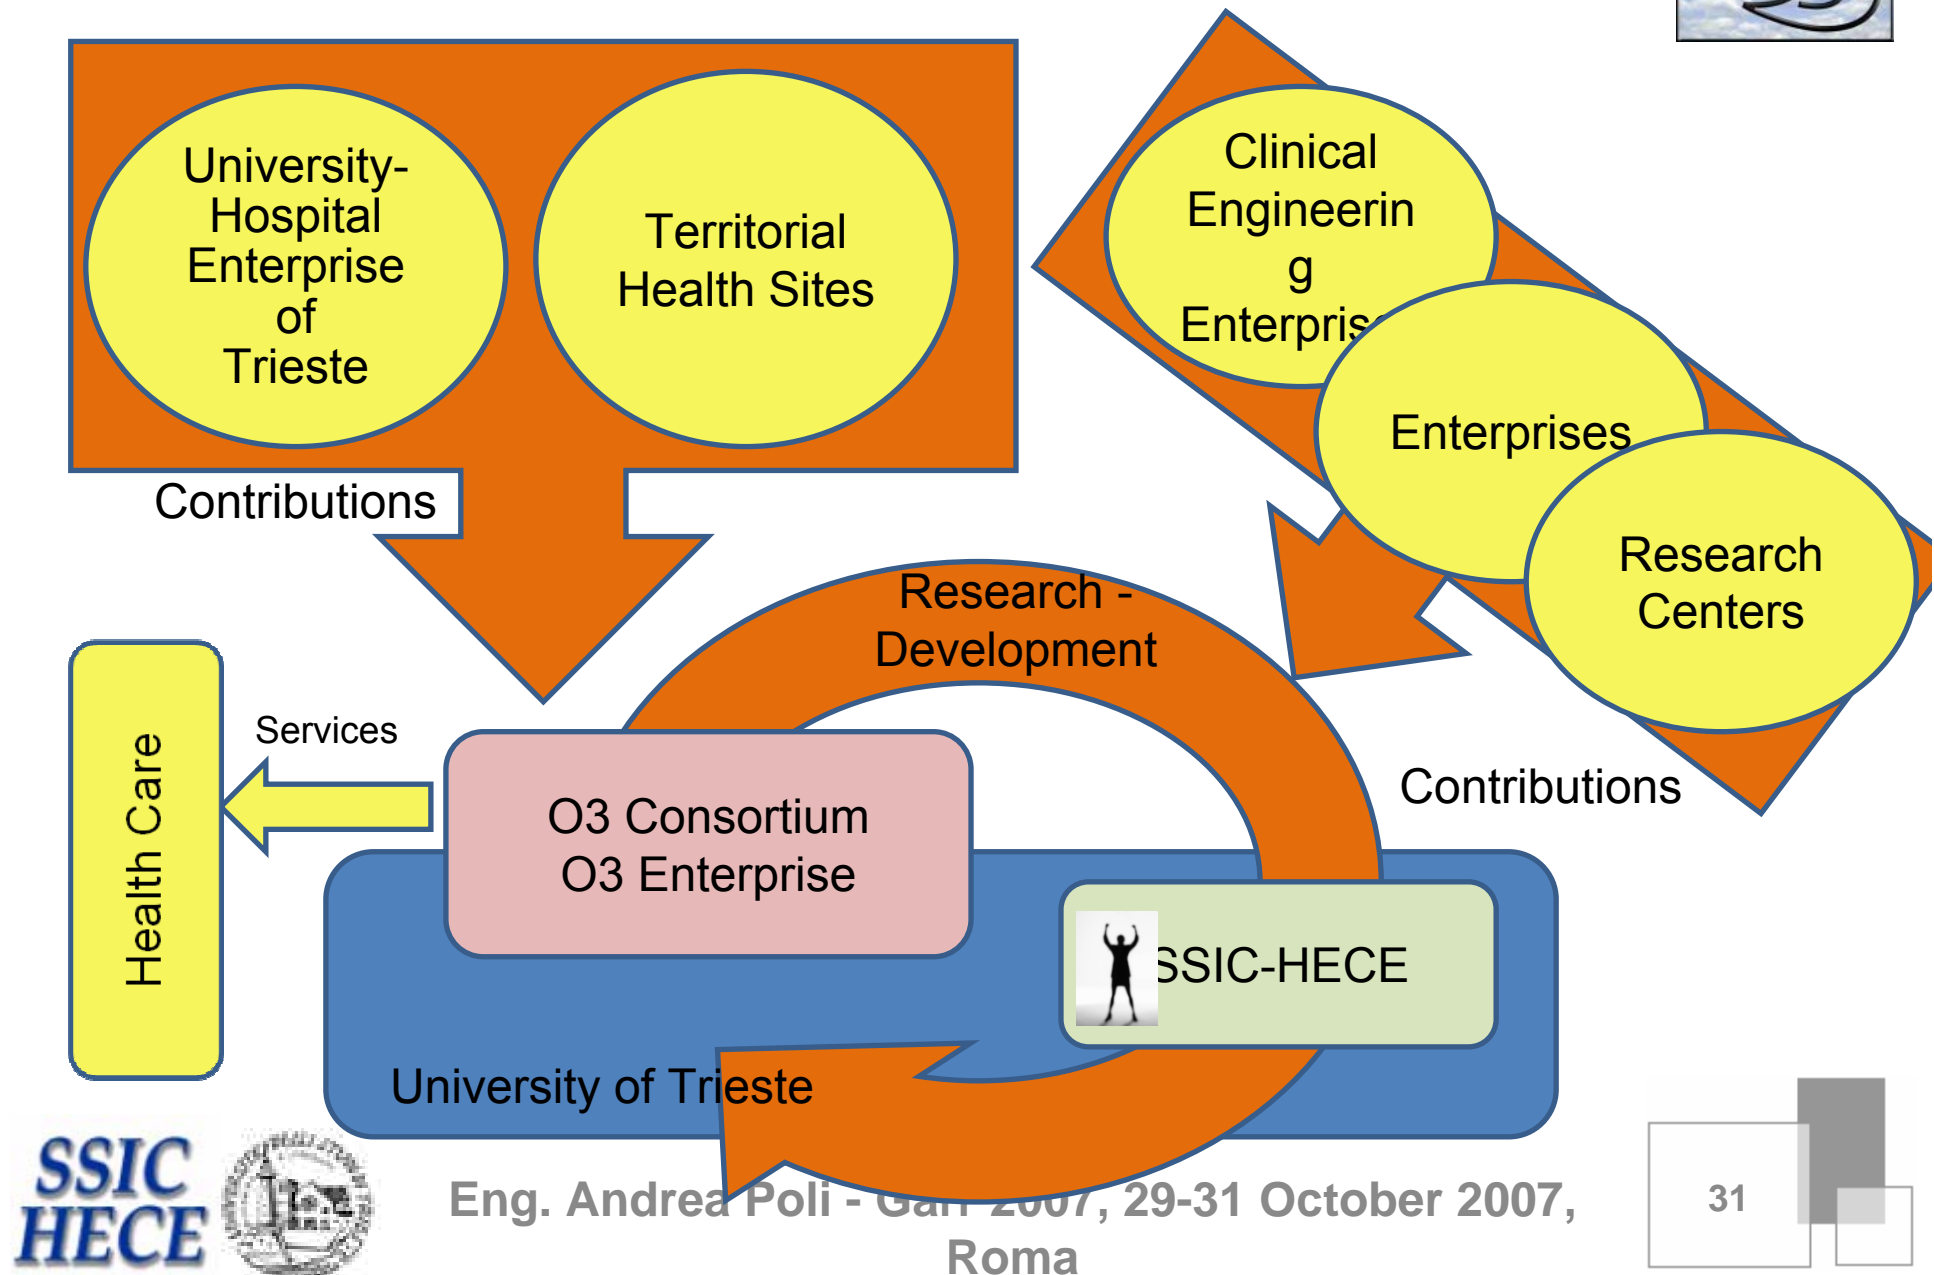

- ➡ Trieste, the city of Science, is a very good place for pushing this model:
 - ◆ Clinical Engineering Education (SSIC-HECE)
 - ◆ Biggest Clinical Engineering Services Enterprise
 - ◆ Very good Clinical Engineering Service in the Hospitals
 - ◆ Big Research Centers
- ➡ All together interconnected by a high speed and secure network:

TPBN GARR-B PoReR WP29: The protected biomedical networks on the NRT 2000's Trieste – september 2000

The new model – solutions development

Eng. Andrea Poli - Jan 2007, 29-31 October 2007,
Roma

The End

Thank you for your attention
