# LIFT: Scientific Users

## INRIM LIFT:

Dorsale di Tempo atomico in fibra

Tecnologie Quantistiche  
Radioastronomia  
Fisica atomi ultrafreddi  
Spazio - Galileo  
Quantum Key Distribution  
Cybersecurity

- 1850 km Dark Fiber
- Coherent Technique
- Cancellazione di rumore bidirezionale
- Collega già 5 istituti di ricerca  
CNR-LENS-ASI-INAF

Funding: INRIM, MIUR, <sup>5</sup>  
Fondazione San Paolo, EU

# LIFT: INDUSTRIAL USERS

3 Industrial Partners  
Connected:

Thales Alenia Space Italy  
Telespazio;  
Consortium Top-IX

Technique: PTP-WR

# TIME AS A SERVICE

Consorzio TOP-IX

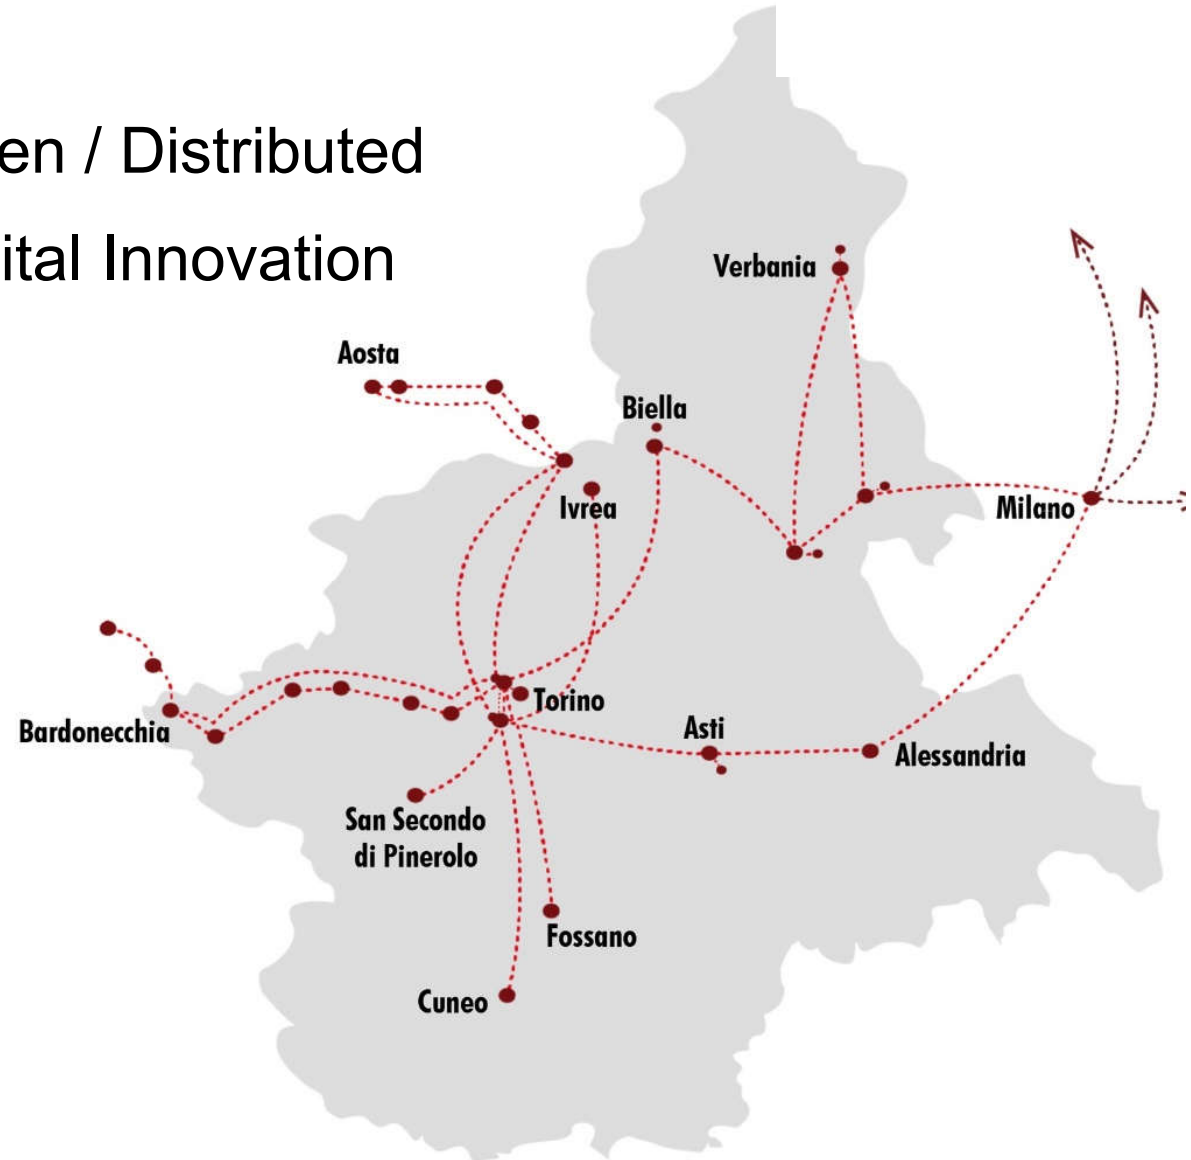

Non Profit / Neutral / Open / Distributed

Internet Exchange + Digital Innovation

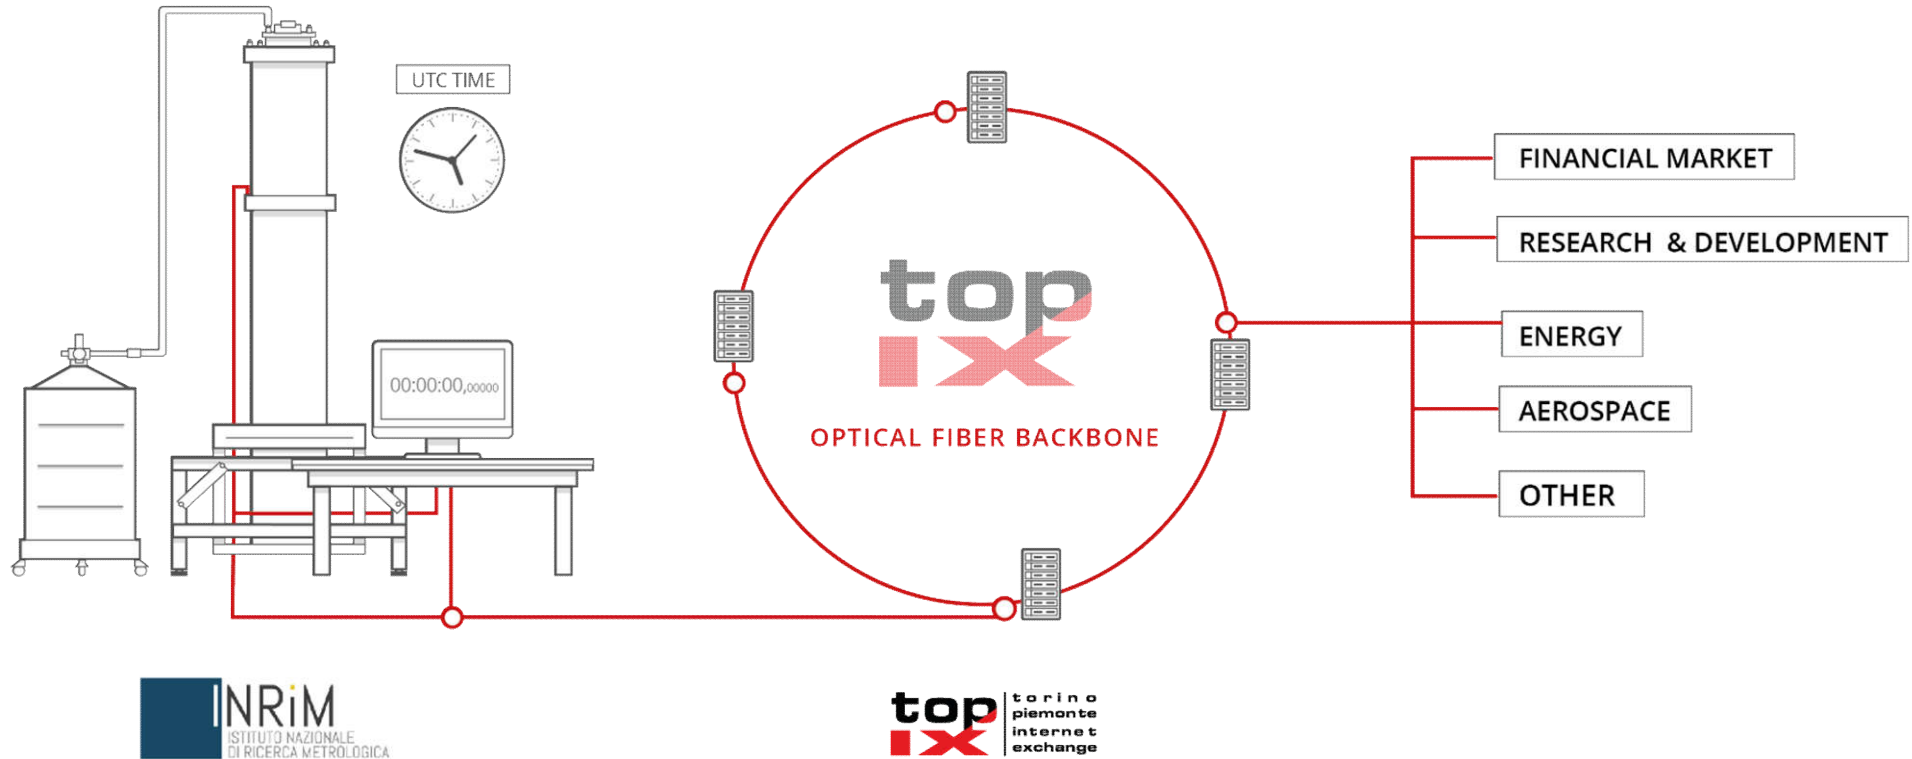

720 km di Fibra

150.000 Users

>85 Members

# TIME AS A SERVICE

## Already Available

- DWDM IX architecture (alien lambda)
- Certified Timing (Traceability to UTC)
- High Integrity /SLA

## Precision Time Protocol

White Rabbit  
PTP-WR

# What is White Rabbit?

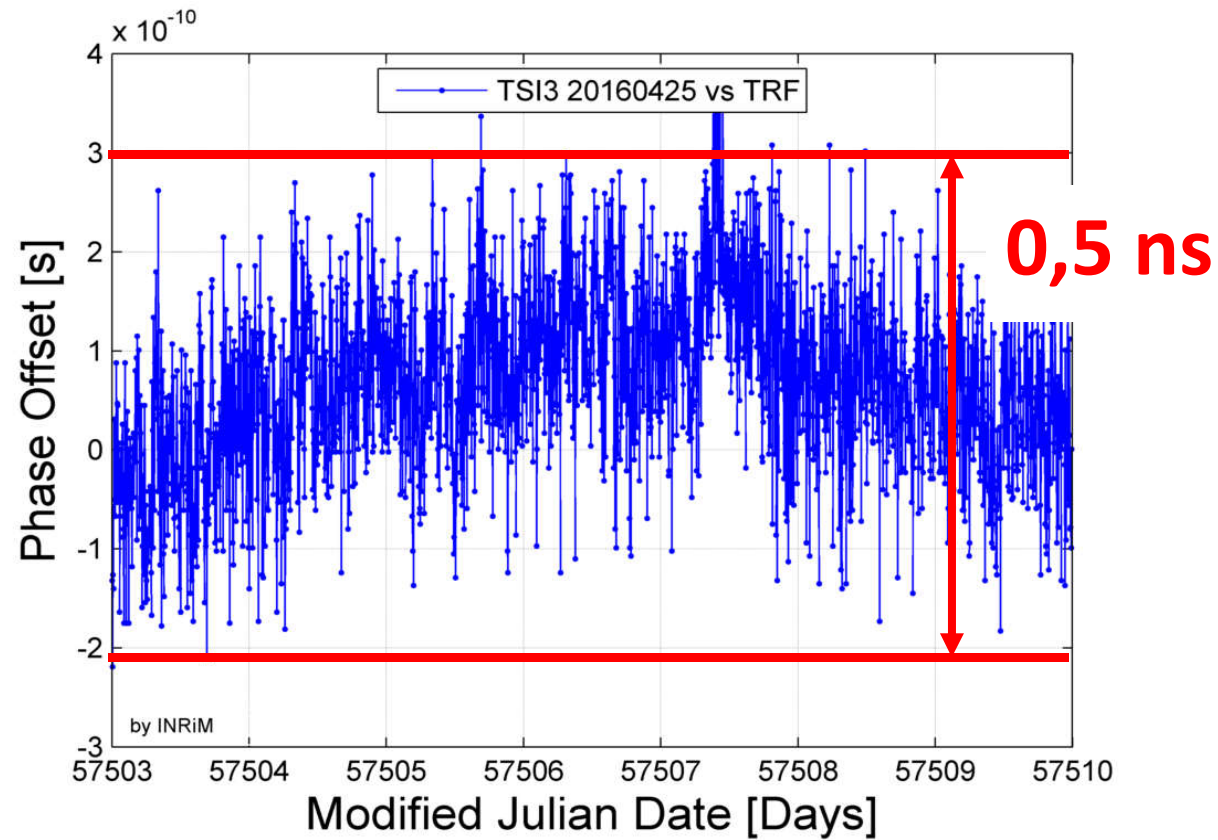

- Open hardware and open software project
  - Synchronous Ethernet (SyncE)
  - Precise Time Protocol (PTP)
  - Digital Dual-Mixer Time Difference (DDMTD)

The aim is to develop a **distributed timing and data network** capable of synchronizing up to 2000 nodes with an **accuracy less than 1 ns** relative to the master timing station **over long hauls**

# Performances Time As A Service (PTP-WR)

User Timing  
vs UTC

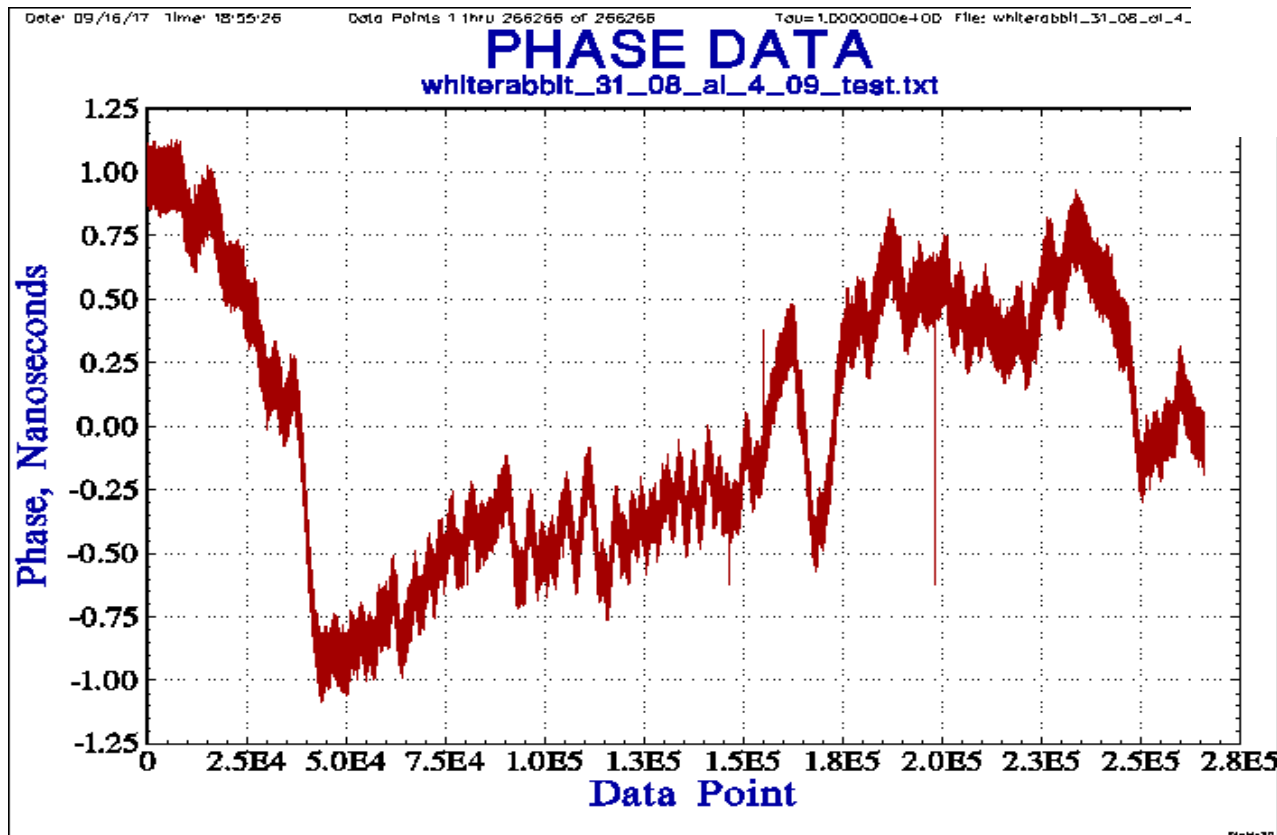

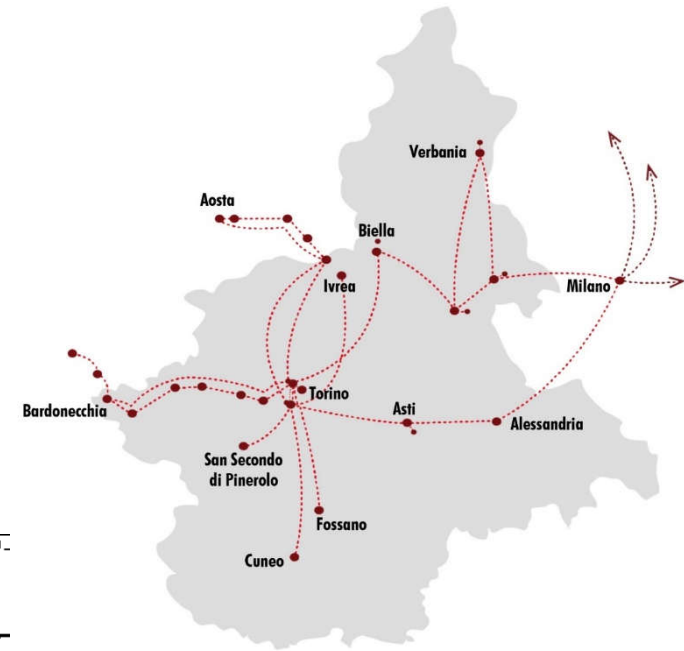

Validation:

- PTP-WR vs GPS-PPP comparisons
- In field over 150 km

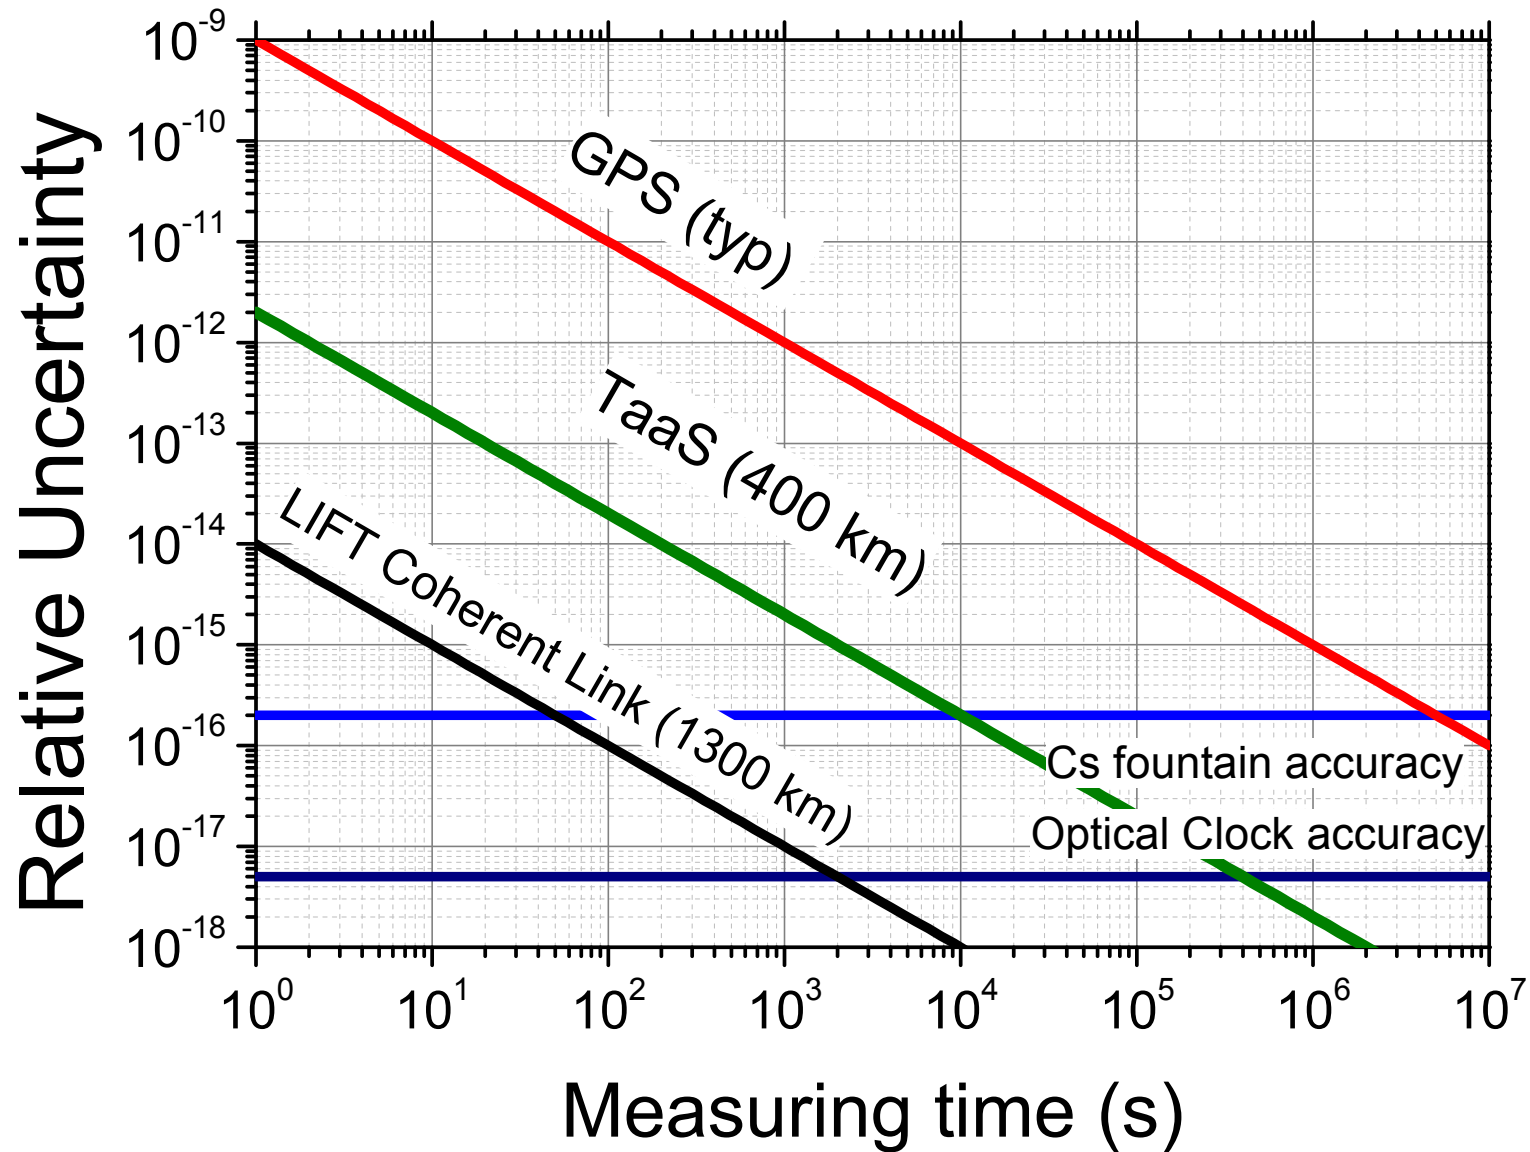

# Prestazioni TaaS /2

- RISULTATI @400 KM  
(Torino-Milano-Torino sull'anello)
- DWDM Alien Lambda,
- infrastruttura della rete di trasporto dati

- Improving towards always <1 ns
- High reliability
- Ok for 90% applications

# Time over Fibre: Performances

# WRITE (JRP-i26):

## White Rabbit Industrial Timing Enhancement

Coordinator: D. Calonico

### June 2018- 2021

The EMPIR initiative is co-funded by the European Union's Horizon 2020 research and innovation programme and the EMPIR Participating States

SUPPORT FROM: CERN,  
Nokia, NIST, Fair-GSI,  
INAF, Sunet, Onsala Space  
Obs , Netnod, Schneider  
Electric, Sverige Radio

# METHODS

## IMPROVING PTP-WR FOR INDUSTRY:

WP1 - Scalable Calibration Techniques

WP2 - Resilient and Redundant Time Transfer

WP3 - Improving Performances of White Rabbit

Adequate TRL  
Performance Gain  
Clear Protocols

Feedback on the  
implementation  
Industrial Assessment

## WP4 -IN-FIELD INSTALLATION AND VALIDATION

WR UTC Time and Frequency Distribution for  
Industrial Users

IMPACT

# 2<sup>nd</sup> level Specializing Master's Programme in **PHOTONICS FOR DATA NETWORKS AND METROLOGY**

## **AT A GLANCE**

Data traffic will experience a dramatic growth over the next years driven by 5G access, high-definition video, virtual and augmented-reality contents, and the considerable growth in cloud services due to Big Data Exchange. Photonic data networks will be required to be more and more pervasive and elastic, to supporting the paradigm of Internet of Thing and to enabling Industry 4.0. Besides data transport, photonic networks will also distribute time and frequency (T/F) standards for research and industry, enabling orders of magnitude performance improvements with respect to satellite systems, over continental geographical areas. The list of institutions supporting the initiative testifies the need for a vertical multidisciplinary knowledge, from the transmission layer up to the IP layer, and training such new professional figures is indeed the mission of the 2nd level Specializing Master's Programme.

**Deadline:** September 7<sup>th</sup> 2018 (11:59 a.m.)

**Campus:** [Politecnico – Lingotto](#), Turin

**Format:** full time

**Language:** English,

**ECTS:** 69

**Internship:** at companies and/or research institutes in the photonic technologies field.

**Number of participants:** 10 – 25

## **COURSES**

- 1 Digital Communication**
- 2 Optical Transmission**
- 3 Photonic Devices**
- 4 Time and frequency metrology**
- 5 Ultrabroadband access network**
- 6 Long-haul optical transport**
- 7 Photonic Networks**
- 8 Quantum Communications**
- 9 Photonics applications in metrology**
- 10 Time and frequency laboratory**
- 11 Security for ICT**
- 12 Communications laboratory**
- 13 INTERNSHIP**

The Programme is supported by the EU through the project H2020-INFRAINN-CLONETS and will offer theoretical and practical lecturing, hand-on experiences and a final internship in European industrial and/or research environments.

 ISTITUTO NAZIONALE  
 DI RICERCA METROLOGICA

# CONCLUSIONS

- Coherent Fibre Link for Scientific Users
- PTP-WR for industrial AND Academic users
- INRIM/TOPIX Time As A Service
- WRITE project to scale up PTP-WR adoption
- PTP-WR is supported by a worldwide community, to target also scientific excellence / is close to standardization
- H2020-CLONETS to build a European Network
- Italy is rally active in the field
- Collaboration Inrim – Gar going on

GRAZIE  
PER L'ATTENZIONE

# OBJECTIVES / SCIENTIFIC EXCELLENCE

## O1: Scalability

To develop scalable calibration techniques for PTP-WR.

Target: best uncertainty 200 ps;  
Using existing fibre configurations

### WP1

#### Scalable Calibration Techniques

- Propagation Calibration
- Absolute calibration
- In Field protocols

## O2: Resilience

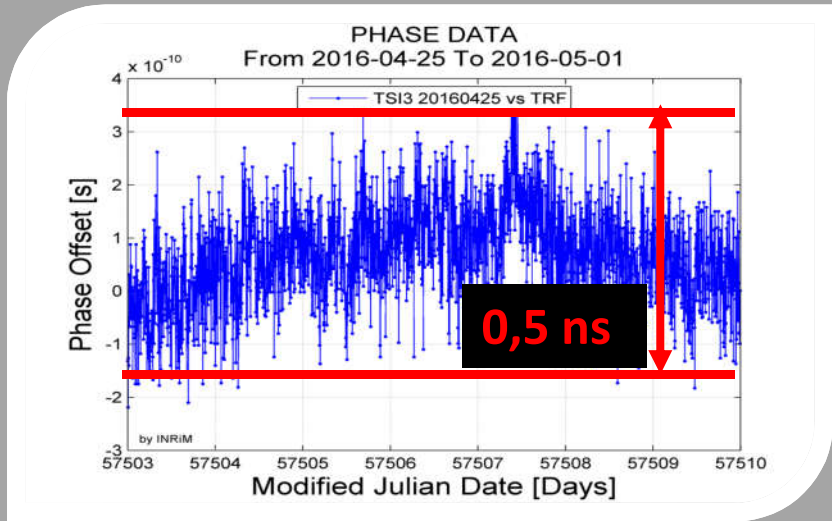

To develop validated techniques for redundant and resilient time transfer

### WP2

#### Resilient and Redundant Time Transfer

- Network topologies
- Resilience and hold-over
- Network Monitor

# OBJECTIVES / SCIENTIFIC EXCELLENCE

## O3: Performance

New PTP-WR devices, with improved performance and better compatibility with existing protocols and standards.

Target freq. instability:  $< 1e-13$  @100s

## WP3

### Improving White Rabbit Performances

- Improving WR Hardware  
(Local Oscillator, physical PPS output, Digital electronic FPGA)
- Compatibility with other protocols

# OBJECTIVES / SCIENTIFIC EXCELLENCE

## O4: Real field

Demonstrate the use of PTP-WR to deliver UTC to industrial users (from TRL 5 to TRL 9).

### WP4

#### UTC T/F Distribution for Industrial Users

- Protocols and stress test
- UTC(OP) to space industry (Thales)
- UTC(IT) to space industry, (LEONARDO)
- UTC(VSL) to Point of Presence of Internet Exchange
- UTC(SP) to a telecom user

## O5: Impact

Take up of the technology and measurement infrastructure developed by WRITE

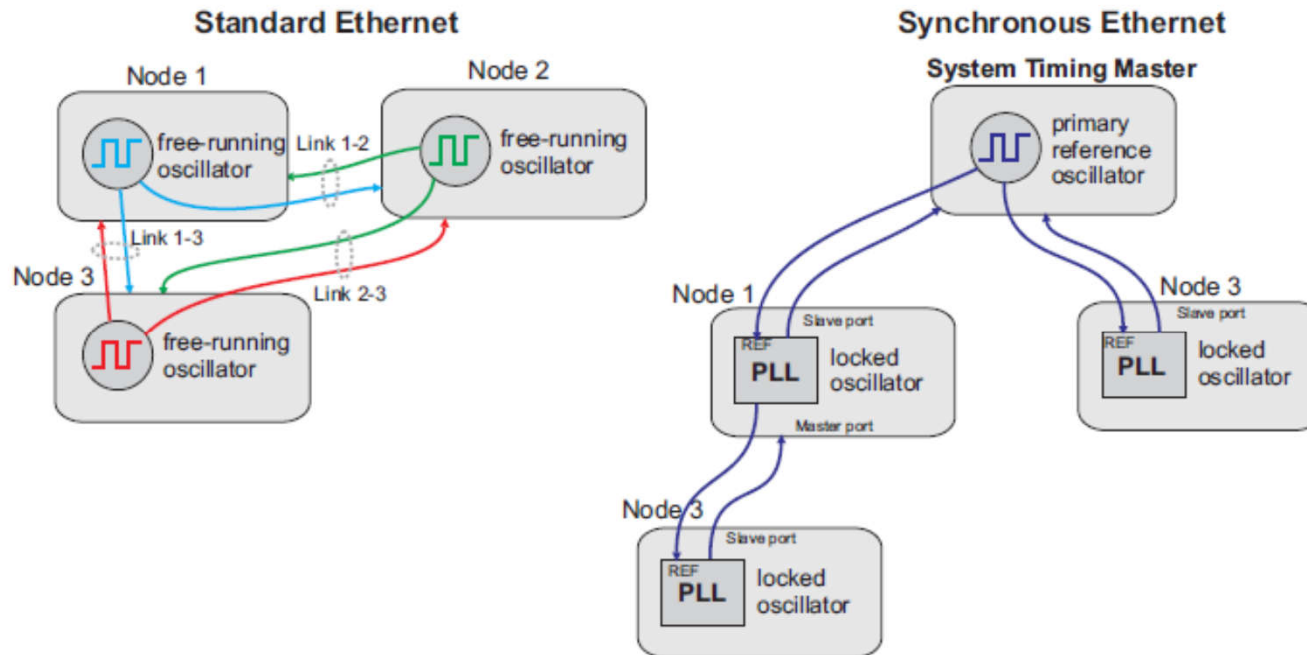

### WP5

#### Creating Impact

- Knowledge Transfer/ Training
- Stakeholder Committee
- Congresses/Papers
- Workshop (M24)

# Synchronous Ethernet

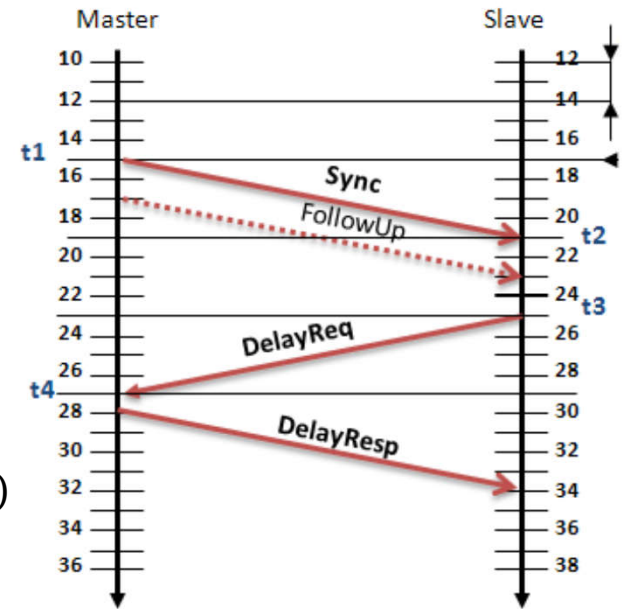

# Precision Time Protocol

- Packet-based synchronization protocol
- Synchronizes local clock with the master clock
- Link delay evaluated by measuring and exchanging packets tx/rx timestamps

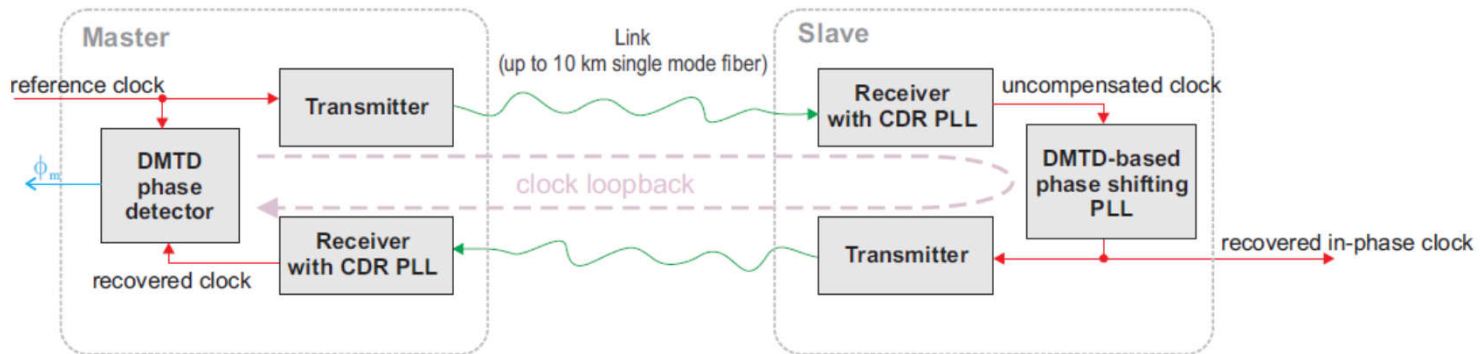

Round-trip time  $\Delta = (T_2 - T_1) + (T_4 - T_3) = (T_4 - T_1) - (T_3 - T_2)$

Offset  $\delta = \frac{(T_2 - T_1) + (T_3 - T_4)}{2}$

# Digital Dual-Mixer Time Difference

- PTP limitation: timestamping granularity
- Solution: take advantage of SyncE and measure phase shift

# Implementation

- A White Rabbit network is composed of:
  - WR Switches
  - WR Nodes
  - WR Timing Master
  - Copper/Fiber links (same optical link used for transmission/reception)
